HORIZONT ENERGISERS WITH

SAFETY & SERVICE

+1

Warranty extension

Register online not later than 3 months after the date of purchase and secure an additional warranty extension free of charge!

Repair service

Good service is a key role at horizont. Whether in sales or in the in-house repair workshop - our experts at horizont are available to provide you with advice and practical support. In the unlikely event of a defect or damage to an energiser (e.g. due to lightning, moisture intrusion or similar), horizont's technical service is available at short notice. Many of the horizont specialist trade partners can repair your energiser on site thanks to the simple modular design, or your energiser will be repaired at the service centre in Korbach and you will receive a loaner energiser for the duration of the short repair time (usually 48 hours). During the subsequent safety check, all components of the energiser are tested and you receive a one-year warranty on the complete energiser!

Reliably tested

All horizont energisers undergo a 24-hour endurance test as minimum - safety you can rely on. Only added to the portfolio if all quality requirements are met. Tested according to applicable EU directives and safety standard EN 60335-2-76, built as per DIN EN ISO 9001.

HORIZONT GROUP GMBH

A SUCCESS STORY

“The family-owned company horizont has existed for over 75 years and has developed from a one-man business into a Europe-wide group of companies. Social responsibility and responsible action have always been practised values at horizont.”

Innovations

The first battery-powered energiser was invented by horizont, laying the foundation for a new era in site-independent pasture management. horizont later developed the first ecofriendly, solar-powered energiser, launching a further technical innovation on the market.

Through consistent research and development of new technologies and applications, we have been continuously creating new products that set standards in their respective markets for over 75 years now. This is reflected in numerous patents, utility models and trademarks.

Finding a name

Familiar to every pilot: The artificial horizon in the aircraft cockpit. The development team of the current technical standard at that time also included the electrical engineer Dr. Heinz Müller. When Dr. Müller later sought a new field of activity and founded his own company in 1945, he called it "horizont" in memory of this invention.

Familiar to every pilot:
The artificial horizon.

Tradition

The success story of horizon began in 1945 as a one-man workshop. Livestock owners brought energisers for repair to Dr. Heinz Müller. He discovered that some of them were potentially life-threatening and used this as an opportunity to develop his own energisers - to the benefit of people and animals. Over the decades horizon has developed into one of the most important producers of electric fencing products worldwide and stands for numerous innovations and patents in this sector. Today, horizon has grown continuously as an owner-managed company - over three generations - and offers thousands of articles in the electric fence and animal husbandry sectors.

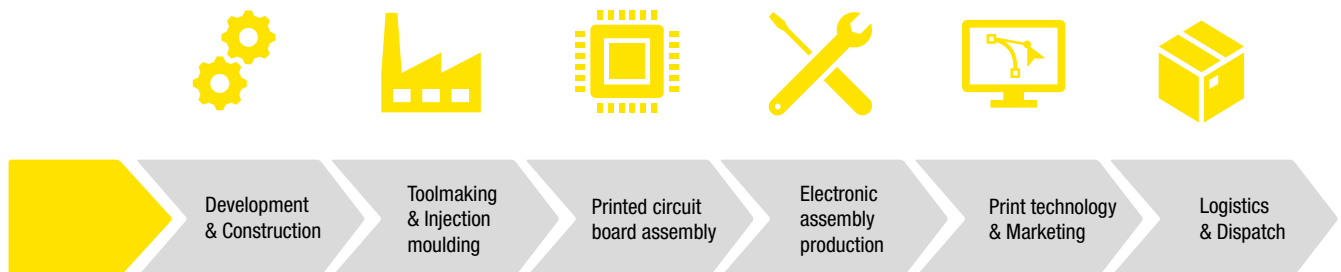

Today horizon is a corporate group with locations in several European countries and exports products with the "Made in Germany" seal of quality to over 50 countries worldwide. horizon will continue to stand for the values "Tradition & Continuity", "Innovation & Quality" and "Service & Advice", making it a competent and reliable partner for livestock owners worldwide.

From generation to generation: from left to right: Company founded by electrical engineer Dr. Heinz Müller, Dipl. Ing. Robert Müller assumes management, Dipl.-Kfm. Steffen Müller now in the 3rd generation in senior management.

All-inclusive full-service package: Everything from one source

horizon energisers and accessory products are developed in Germany according to the latest technical standards. All production steps for the manufacture of electronic components and virtually all plastic products are carried out in the production facilities in Korbach, Germany.

THE FUTURE IN OUR HANDS

The first step towards sustainability and the first of many more steps in the future. At horizon, it is our duty to take action. Together we can evolve.

Sustainability is a matter close to our hearts. It is why we work with recycled materials to an increasing extent, drive innovation with circular products and do progressively more to reduce our carbon footprint. Our product and packaging design should be equal to this in every way. It was therefore time to make this more sustainable as well. Naturally, we also wanted to use this opportunity to incorporate our sense of aesthetics.

OUR RECOMMENDATION

ANIMAL HUSBANDRY

Big horses*

Fence height: 140 - 160 cm
Conductor material: Tape
Number of conductors: 3

Small horses/ponies

Fence height: 120 - 140 cm
Conductor material: Tape
Number of conductors: 3

Cattle/Bulls

Fence height: 100 - 110 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 3

Dairy cows/Calves

Fence height: 85 - 110 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 2

Sheep/Goats

Fence height: 90 - 120 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 5

Pigs

Fence height: 50 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 3

Cats/Dogs/Poultry/Rabbits

Fence height: 80 - 105 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 4

Fence height: 50 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 4

Sheep/Goats

Net height: 90 - 45 cm

Poultry

Net height: 105 cm

Hares/Rabbits

Net height: 50 - 75 cm

WILDLIFE DETERRENT

Wild boars

Fence height: 80 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 3

Deer

Fence height: 140 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 5

Wolves

Net height: 90 - 120 cm

Wolves

Fence height: 90 - 120 cm
Conductor material: Tape, rope, polywire, wire
Number of conductors: 5

MOBILE ELECTRIC FENCE

CHECK LIST

WHICH EQUIPMENT IS NECESSARY FOR A PERMANENT OR MOBILE FENCE?

	What?	Why?
<input type="checkbox"/>	1 Energiser	The energiser transmits pulses to the fence. These pulses provide the deterrent to the animal at the electric fence.
<input type="checkbox"/>	2 Solar solutions	Use the energy of the sun for 9 V battery energisers and 12 V battery energisers. Save battery costs and tiresome recharging of the battery.
<input type="checkbox"/>	3 Energy supply	The right energy source for your energiser: 12 or 9 V batterie, mains, solar, or even a combination is possible.
<input type="checkbox"/>	4 Connection material lightning protection, switches	Makes the electrical connection from the energiser the fence. Lightning protection systems are a must for mains energisers.
<input type="checkbox"/>	5 Earthing	The energy flows from the ground through the earth stake and the connecting cable back into the energiser.
<input type="checkbox"/>	6 Control devices Fence accessories, warning signs	Control devices are necessary for informative fence inspection – they make it easier to check the legally required fence function test.
<input type="checkbox"/>	7 Conductor material Tapes, polywires, ropes, wires	Conducts the electrical pulse in the fence. The conductor is uninsulated and laid open to make good contact with the animal.
<input type="checkbox"/>	8 Connecting and tensioning	The conductor material can be connected firmly and electrically conductive with connectors. The right tensioners ensure taut conductors to avoid injuries to the animals.
<input type="checkbox"/>	9 Insulators	The conductor material is well insulated and held in position. The right insulator should match the conductor material.
<input type="checkbox"/>	10 Gate handles and sets	A gate is normally used several times a day and should be easy to use.
<input type="checkbox"/>	11 Reels	A mobile fence or mobile sections can be set up and dismantled quickly and easily with a reel.
<input type="checkbox"/>	12 Posts	Plastic or metal posts with insulators hold and guide the conductor material along the field and to the ground. We recommend strong wooden posts for gates and corners.

02

Energisers

The heart of an electric fence system is the energiser. An energiser with the appropriate power will reliably supply the fence system with pulses, which ultimately provide the deterrent effect.

FAQ

ENERGISERS

The horizont service for you:

All horizont energisers come with a two to five year warranty.

PREMIUM QUALITY

MADE IN GERMANY

All horizont energisers are produced in Germany which is why they are known for their *premium quality*.

WHAT DOES THE ENERGISER DO?

- The energiser emits short current pulses that flow along the fence and remain unused if there is no animal contact or discharge.
- The pulse duration is only 0.1 to 0.3 thousandths of a second and the pulse spacing is between 1.15 and 2.0 seconds.

WHY A CLOSED CIRCUIT?

The circuit must be prepared so that it is closed when it comes into contact with the animal. It is also important to ensure that the current remains in the fence and really only activates when it is touched by an animal.

WHAT IS EARTHING?

- Earthing is the "counterpart to the freely installed conductor material" in the fence.
- The energy emitted by the energiser is fed back into the energiser through the ground and the earth stakes. When the fence is touched, the circuit is closed via the earthing.

TIP: EARTHING WITH DRY GROUND

Earthing: The number of earth stakes refers to damp soil. If the soil is dry in summer, the number may have to be increased.

WHAT HAPPENS WHEN THE ANIMAL TOUCHES THE FENCE?

- The animal closes the circuit. The pulse emitted by the electric fence energiser flows through the conductor material, the animal's body, the ground and the earth stakes back into the electric fence energiser. Similar to a light switch, the animal or vegetation closes the circuit and the energy flows.
- The animal learns to accept the fence as a barrier.

WHAT HAVE JOULES & VOLTS GOT TO DO WITH IT?

- Energy applied to the fence is expressed in joules. The higher the value, the stronger the electric shock. Joules hurt!
- The voltage of the fence is measured in volts. The voltage is needed to strike through the insulating hide of the animal. This is the only way the energy can jump over. Voltage is the carrier for what causes the pain!

WHY USE HIGH QUALITY CONDUCTOR MATERIAL?

- The conductive material is the actual fence, i.e. tapes, ropes, polywires or wires.
- The conductor material transports the electricity and forms the barrier for the animals. The better the material, the higher the current that flows through the fence.
- Saving on conductor material is to be penny-wise and pound-foolish. Poor conductor material may cause significant energy loss and prevent electricity from reaching the end of the fence. Never knot your conductor material! Too much energy is lost in the process. Always use suitable connectors to guarantee the current flow.

IS LONG GRASS AT THE FENCE A BAD THING?

- Yes, because grass or other vegetation diverts energy from the fence and the fence therefore loses energy.
- For vegetation, reduce the fence lengths as follows:
FOR AVERAGE VEGETATION:
 To approx. 50 % of the specified fence length*
FOR DENSE VEGETATION:
 To approx. 20% of the specified fence length*

HOW FAR APART SHOULD THE POSTS BE?

To ensure the conductor material is optimally fixed between the posts, the following distances have been proven to be effective:

- **POLYWIRES AND WIRES:**
6 m to 8 m (depending on net weight)
- **TAPES:**
3 m (for wide tape 40 mm), 5 m (for wide tape 20 mm), 6 m to 8 m (for wide tape 10 mm)
- **ELECTRIC ROPE:**
4 m (for diameter 6 - 8 mm), 6 m (for diameter 5 - 6 mm)
- **TERRAIN:**
Observe the local conditions! If the terrain is very uneven, several posts are required to guide the conductor material parallel to the ground.

WHAT ELSE NEEDS TO BE CONSIDERED?

- **Important:** Never operate fence systems and netting without an energiser!
- **Conductivity:** Be sure to use conductor material with high conductivity and good earthing, especially for high pulse energies.
- **Connectors:** Never knot your conductor material - always use suitable connectors to guarantee the current flow.
- **Warning signs:** For safety reasons, you are legally obliged to attach these to your electric fence, clearly visible and printed on both sides.
- **Circuit:** The fence does not have to be set up as a closed circuit - the circuit is closed by the animal contact.
- **Daily check with fence testers**

TIP

But one thing must not be forgotten: The energiser is useless if it is connected to a defective fence!

HOW DOES AN ENERGISER WORK?

The energiser is supplied with power from the mains, a battery or a rechargeable battery (sometimes with solar support). When the energiser is earthed and connected to a fence, your circuit is not closed. If an animal now touches the fence, the electric circuit is closed by the animal: The current flows from the fence through the animal to the earth. To eliminate the risk of dangerous electric shock, the energiser sends the charge to the fence in pulses. A high voltage must be generated so that the current can flow over the animal on contact. The energy must also be "portioned" so that no dangerous current flows at the high voltage.

WHICH ADDITIONAL FUNCTIONS DO HORIZONT ENERGISERS OFFER?*

horizont energisers are equipped with various, sometimes automatic, functions. These guarantee simple and flexible adaptation to the respective type of use, fence quality and vegetation. Moreover, you can get by with fewer batteries throughout the entire electric fence season, as many energisers are equipped with a power economiser (ECO Power / power saving function).

The premium products are made of particularly stable and weather-resistant plastic. They are splash-proof protected, electrically well insulated and suitable for high operating temperatures in the sun. Some energisers have an LED display that provides information about the state of the fence despite being far away. The time spent on controlling is reduced to a minimum as the output voltage can be read directly on the energiser (Energy Control Power Control, Impulse Control, System Control).

There are also some features which ensure herding security in difficult situations in case of damage (2-stage CPN technology, turbomax technology).

* The range of functions differs between the different types of housing and energy supply

THE CHOICE OF THE RIGHT ENERGISER

WHICH ENERGY SUPPLY IS PREFERRED?

horizontal distinguishes between battery energisers 9 V, rechargeable battery energisers 12 V, mains energisers 230 V and solar energisers. Many energisers also combine different types of power supply in order to offer more security and flexibility in the application. In addition, horizontal offers different housing shapes, which are reflected in the operating mode. The main difference is in stationary housing forms for wall mounting and mobile housing forms for handy transport.

Battery energiser
9 V

Battery energiser
12 V

Mains energiser
230 V

Solar energiser

HOW LARGE IS THE AREA TO BE FENCED?

The fence length is important for the choice of the right energiser, but so is the conductor material. The power of the energiser and the conductivity of the conductor material must be compatible! To simplify the choice of suitable products for you, horizontal has grouped together matching products in series.

Please note that the length specifications always assume optimal conditions, any disruptions and growth are excluded. With vegetation, for example, a partial amount of energy is diverted from the fence into the ground and is then missing from the herding performance.

WHICH ANIMALS ARE TO BE HERDED?

Each animal has special characteristics and reacts differently to the current pulse. The sensitivity and coat of the animals is important for the correct construction of the electric fence. Horizontal has developed special pulse shapes for different situations to ensure herding security for every animal species and every fence situation. The animal symbols make it easy to identify the energiser recommended for a particular animal species.

WHICH ADDITIONAL FUNCTIONS DO HORIZONTAL ENERGISERS OFFER?

Each energiser has individual features and additional functions that are advantageous depending on the application. Some are found in the housing shape, others are technically incorporated. You will find these on the product pages under "Features" or discover more in our practical overview on 5.

SAFE HANDLING OF ENERGISERS: PROTECTION AGAINST FIRE, BLAZE, AND LIGHTNING

The energiser must not be installed inside buildings in operating areas with a fire hazard, such as barns, and should also be protected from mechanical damage and kept out of the reach of children. To prevent lightning damage, a specialist must install an earthed lightning protection energiser in the fence supply cable to the building or prior to entry into a building.

You will find detailed information in our safety instructions: www.animalcare.horizontal.com/Secura

ENERGY SUPPLY CLEVERLY COMBINED

Electrified non-stop!

The horizont DUAL energisers with Safety⁺

Regular 230 V operation.

The power supply fails!

Automatic switch-over
to 12 V battery operation.

DUAL

Can only be done by horizont energisers:

Automatic switch-over to battery operation in the event of an interruption in the power line.

Dual energisers are primarily operated via 12 volts or 9 volts. The energisers can also be connected to 230 V via a plug-in mains energiser. The 12 volt battery then serves as a backup battery and is charged via the plug-in power supply. If the 230 volt mains fails, the energisers continue to operate without interruption via the 9 or 12 V battery. The energisers can also be operated with a solar panel in conjunction with a 12 or a 9 volt battery.

COMBI

Combi energisers from the 12 V battery range can be operated on the 230 V mains or on the 12 V battery. Combi energisers from the battery range can be operated on the 12 volt battery or on a 9 volt battery. A solar panel can additionally be connected directly to the 12 V battery or to the 9 V battery via the energiser.

FROM HOBBY TO PROFESSIONAL

PRODUCT SERIES

The innovative series concept

The right product series for every application:

The horizon electric fence series covers all areas of application: From hobby to professional. The components of a series guarantee optimal interaction.

Beginning with the entry-level series trapper® to the premium series turbomax®, horizon offers the optimal solution for every area of application, whether cattle, horse, sheep/goat husbandry or small animal keeping.

Nearly all energisers are produced in Germany and undergo a multi-stage quality assurance process during production, which is DIN EN ISO 9001 certified. This provides the greatest possible safety both in the use of individual components and for the finished product.

You will find the energiser features with explanations on the respective product in the catalogue.

farmer®

IDEAL FOR CALM GRAZING ANIMALS AND NORMAL OPERATING CONDITIONS

The farmer® range of energisers includes our all-rounders for electric fence management. They are ideal for calm grazing animals that are kept under normal operating conditions. This series also includes many energisers that have a dual function.

- Special pulse shape deploys gently in the fence system
- High output voltages offer great herding security

THE MOST IMPORTANT FEATURES*:

- Polycarbonate
- ON /OFF switch
- Energy Control (display of battery/rechargeable battery capacity)
- ECO Power (power economiser)
- Very sturdy housing
- Power Control (pulse control)

trapper®

IDEAL FOR SMALL, SIMPLE FENCE SYSTEMS

Our trapper® series is very suitable for newcomers and hobby livestock owners. The trapper energisers are the ideal choice for small and simple fence systems.

- Simple to use, easy to install
- Compact housing, versatile in use
- Output energy designed for the most common applications, e.g. horse keeping

THE MOST IMPORTANT FEATURES*:

- ON /OFF switch
- Energy Control (display of battery/rechargeable battery capacity)
- Very sturdy housing
- Power Control (pulse control)

hotshock®

IDEAL FOR ROBUST ANIMALS AND FOR WILDLIFE DETERRENT

This series is perfectly suited for deterring robust animals or the keeping of long-haired and feathered animals. hotshock® energisers can therefore be used for sheep and goat farming in combination with netting. They regulate every difficult situation, making them useful as special solutions in wildlife deterrent.

- Strong energisers with maximum output energy
- Special pulse shape enables special herding security under the most difficult conditions

THE MOST IMPORTANT FEATURES*:

- Polycarbonate
- ON /OFF switch
- Energy Control (display of battery/rechargeable battery capacity)
- ECO Power (power economiser)
- Impulse Control (cycle sequence monitoring)
- Very sturdy housing
- 2 fence terminals
- Power Control (pulse control)

ranger®

FOR EXACTING DEMANDS AND DRY SOIL CONDITIONS

Our professional series for exacting demands and dry location conditions. The ranger® energisers are ideal for grazing animals such as cattle or horses. This series also includes many energisers that have a dual function.

- Energiser function can be adapted to fence conditions depending on the situation
- Special pulse shape deploys gently in the fence system
- Large herding performance even during dry summer periods

THE MOST IMPORTANT FEATURES*:

- Polycarbonate
- ON /OFF switch
- System Control (argutector fence control)
- Energy Control (display of battery/rechargeable battery capacity)
- ECO Power (power economiser)
- 6-stage voltage display
- Impulse Control (cycle sequence monitoring)
- Very sturdy housing
- Voltage regulator (rotary potentiometer)
- 2 fence terminals
- 6 modes function

turbomax®

POWERFUL PERFORMANCE FOR HIGHEST DEMANDS

Our premium series for extreme and particularly high demands. The turbomax® energisers are extremely powerful energisers and are suitable for extremely long fences. turbomax energisers can be used for herding almost all types of animals.

- Important safety features and functions that are very useful for the user
- Special safety circuit, which increases the performance when required

THE MOST IMPORTANT FEATURES*:

- Polycarbonate
- ON /OFF switch
- System Control (argutector fence control)
- Energy Control (display of battery/rechargeable battery capacity)
- ECO Power (power economiser)
- 6-stage voltage display
- LED display
- Alarm function
- 2-stage CPN technology
- Impulse Control (cycle sequence monitoring)
- Very sturdy housing
- turbomax technology

DID YOU KNOW?

Each horizon electric fence battery is fitted with connecting cables - no additional accessories are required for connection to the energiser.

Battery energisers 9 V

Battery energisers are small and handy. This makes them particularly suitable for mobile use. They can be operated with a 9 volt battery or with a 12 volt lead-fleece battery. All battery energisers can also be expanded to solar operation with a solar panel.

The dual energisers can also be connected to the 230 volt mains. The battery energisers offer many possible uses. The maximum output energy of the battery energisers is limited by the performance of the batteries. The use of a lead-fleece battery allows greater energies to be realised.

But beware: 9 V Batteries cannot be recharged. Once they are completely discharged, they must be disposed of properly.

Each horizont electric fence battery can be stored for up to two years without any significant loss of capacity.

There are two different battery versions: Alkaline batteries (air cells) and zinc-carbon batteries. Both versions are mercury- and cadmium-free and therefore environmentally friendly. Further information on the two battery versions at Page 62.

ABN30GREEN battery energiser 9 V

Ergonomic carrying handle

- Carrying comfort thanks to soft grip padding
- Easy to move with one hand

ECO Power - power economiser:

- Power consumption is automatically adjusted to the fence condition
- less energy consumption = less environmental impact and lower costs

Extremely robust housing

- Sustainable housing of bio-based PP
- Material is UV resistant, splash-proof and oil-resistant
- Housing holds rechargeable batteries with a capacity up to 27 Ah and batteries up to 200 Ah

ON/OFF switch & Energy Control

- 3-stage LED control display for capacity and function of 9 or 12 V batteries
- Shows the activity of the energiser
- Flashes in time with the pulse output

Rear view

Earth terminal

Fence terminal

Safety advice: In 230 V operation, the energiser and the power supply unit should and must be installed in a room protected from moisture. Please also see the note on page 16.

	Max. fence length	Netting:	2 x 50 m
		As per CEE:	9.5 km
		Without vegetation:	5.5 km
		Average vegetation:	3.8 km
		High vegetation:	0.9 km

Animal husbandry:

Input: • 0.4 J
Max. output: • 0.3 J

Energy consumption: • 9 V: 28 - 36 mA
• 12 V: 24 - 28 mA

Max. voltage: • 10,000 V

Voltage 500 Ω: • 3,200 V

Dimensions (L x W x H): • 17.5 x 24.8 x 31.9 cm

Scope of delivery: • Energiser, earth stake, fence and earth connecting cable, 230 V power supply unit

Art. No.	Unit	EAN
10862	1	4 014803 467492

Energy supply:

Recommended accessories:

- 12 V lead-fleece battery, 34 Ah (14501) ≥ service life: 50- 59 days* or 9 V alkaline battery with 150 Ah (14057E) ≥ service life: 173-223 days*
- 230 V power supply unit (47PSU0010FEU)
- Earth stake 1 x 1 m (14041-1)
- Solar panel 1 x 5 W (14499)

DUAL

Dual energisers can be connected in parallel to 230 V mains power and a 12 V battery. Uninterrupted operation is guaranteed in the event of a power failure.

trapper® AB Battery energiser 9 V

Holding device for solar panel

Handy housing

- Particularly impact-resistant housing through use of high-quality plastics (ABS)
- Material is UV resistant, splash-proof and oil-resistant

ON/OFF switch, Power Control & pushbutton for menu navigation

- Shows the activity of the energiser
- Flashes in time with the pulse output
- Two modes of operation:
 1. Slow pulse sequence
 2. Normal pulse sequence

Bottom view

Earth terminal

Fence terminal

Solar connection

12 V rechargeable battery connection

Spiked post

- For secure stability
- With tread surface

Energy supply

Features

- Automatic switch-over to solar operation

4 014803 144973

Recommended accessories:

- 12 V lead-fleece battery with 12 Ah (15842) ≥ service life: 45/62 days* or 6 V block battery with 50 Ah (230502E) ≥ service life: 83/122 days*
- Earth stake 1 x 1 m (14041-1)
- Solar panel 1 x 2.5 W (14541C)

Selected accessories

Find matching accessories for your horizon energiser in the comprehensive horizon range here in the catalogue or on the horizon website under the corresponding article number.

Optionally 12 V lead-fleece battery with 12 Ah (15842), 6 V block battery with 50 Ah (230502E) or solar panel 2.5 W (14541C)

trapper® B Battery energiser 9 V

Integrated carrying handle

- Easy to move with one hand

Cable bushing

- Intelligent cable routing from inside the energiser to solar panel

Extremely robust housing

- Particularly impact-resistant housing through use of high-quality plastics (PC)
- Material is UV resistant, splash-proof and oil-resistant

Energy supply

Possibilities of energy supply for these energisers:

Features

- Very sturdy housing
- Power Control (pulse control)
- Automatic switch-over to solar operation
- Solar charging control installed in the energiser is weather protected – easy charging of different types of batteries
- Microprocessor control
- Tested and built according to the applicable EU directives and the safety standard EN60335-2-76 and DIN EN ISO 9001

Secure closing mechanism – pull energiser apart and remove cover

Housing serves as portable box and protects rechargeable battery / battery from effects of weather

TIP

Charge your special or lead-fleece battery only with regulated chargers to guarantee a long service life and make sure that the battery is well ventilated.

Battery energisers 12 V

Large fence systems can be operated using battery energisers.

High-capacity batteries can be used to extract so much energy that the turbomax® AN800, for example, can deliver a powerful 8 joules of output energy to the fence.

All batteries can be connected to a solar panel to avoid recharging from the mains if there is sufficient sunlight.

Energisers that can accommodate a battery in the housing also have a solar regulator installed in the energiser. The advantage of this housing shape is that the energiser, battery and solar panel form a compact unit.

Recommended accessories:

- 12 V AGM battery 88 Ah (14549)
≥ service life: 40-122 days*
- 230 V power supply unit (47PSU0010EU)
- Earth stake 1 x 1 m (14041-1)
- Solar panel 1 x 20 W (14536)

- 12 V battery special with 100 Ah (14126)
≥ service life: 16-138 days*
- 230 V power supply unit (47PSU0010EU)
- Earth stake 3 x 1 m (14041-1)
- Solar panel 1 x 30 W (14537)

Selected accessories

Find matching accessories for your horizon energiser in the comprehensive horizon range here in the catalogue or on the horizon website under the corresponding article number.

12 V battery special with 100 Ah (14126)

Solar panel 20 W (14536)

Solar panel 30 W (14537)

farmer® Battery energisers 12 V

ON/OFF switch & Energy Control

- 3-stage LED control display for capacity and function of 9 or 12 V batteries
- Shows the activity of the energiser
- Flashes in time with the pulse output

Ergonomic portable handle

- Carrying comfort thanks to soft grip padding
- Easy to move with one hand

Extremely robust housing

- Particularly impact-resistant housing through use of high-quality plastics (PC and PP)
- Material is UV resistant, splash-proof and oil-resistant
- Housing holds 9 and 12 V batteries up to a size of 265 x 192 x 225 mm

Dual energiser with Safety®

Dual energisers can be connected in parallel to 230 V mains power and a 12 V battery. Uninterrupted operation is guaranteed in the event of a power failure! The energiser switches over automatically to 12 V battery operation.

Features

- ECO Power / power saving function: the power economiser automatically adjusts power consumption to the status of the fence = less energy consumption, less environmental impact and lower costs
- Rechargeable battery or battery is integrated into the handy transport box where it is protected from the weather
- Contact with the battery or the acid is avoided during transport
- Automatic switch-over to solar operation
- Solar charging control installed in the energiser is weather protected – easy charging of different types of rechargeable batteries
- Microprocessor control
- Tested and built according to the applicable EU directives and the safety standard EN60335-2-76 and DIN EN ISO 900

Housing can be secured by padlock

Advantage:
2 in 1

Device for attachment of appropriate solar panel to the back of the energiser cover

Solar panel can be folded away to the side for transport

Safety advice: In 230 V operation, the energiser and the power supply unit should and must be installed in a room protected from moisture. Please also see the note on page 16.

Mains energisers 230 V

The use of a mains energiser assumes that you can access a mains connection in the immediate vicinity of the pasture area.

A mains energiser has the following advantages over other types of power supply:

- High efficiency
- Continuous & reliable operation on 230 V mains
- High operating comfort - no battery replacement necessary
- Can also be used with denser vegetation and animals that are difficult to herd
- Reasonable consumption

trapper® Mains energiser 230 V

Power Control

- Shows the activity of the energiser
- Flashes in time with the pulse output

COMPLETE SOLUTION FOR DETERRING PIGEONS

stallmaster

- Specially developed pulse generator where the output values are adapted to stable applications (cow trainer)
- Approved by the German Federal Veterinary Office (BVET)
- If there is a longer contact with the animal, the energiser switches off after 4-5 pulses. The energiser is restarted by removing the mains plug from the socket for a few seconds before plugging it back in.

scout N2

- The problem: From a hygienic perspective, city pigeons are classified as pests. An average of 10 to 12 kg of wet droppings are produced per year per pigeon. Pigeon droppings corrode building materials such as sandstone, concrete, aluminium, steel, marble and brick. The droppings infiltrate the material and slowly erode it. Regardless of the damage, pigeon droppings make the object look unsightly and neglected. Pigeons can also be carriers of pathogens. In addition, pigeon nests are infested with a variety of vermin such as ticks and fleas, which can also spread to homes.
- The solution: The most effective method of keeping pigeons away is an electrical system in combination with the special pulse generator "scout® N2" from horizont. These electrical systems are virtually invisible and can be adapted as flexible profiles to suit building conditions. The electrical conductors and connectors are made of special alloys and generate low resistance even for long installation distances.
- Special energiser, only for use as pigeon deterrent
- Particularly strong radio interference suppression for trouble-free operation of electrical equipment in buildings

HORIZONT SPECIAL SOLUTIONS FOR YOU

Contact the competent horizont employees with your request, they will help you realise your project professionally. horizont cooperates with many well-known specialists in this field who offer individual and complete solutions for problems on site.

ranger® Mains energiser 230 V

Extremely robust housing

- Particularly impact-resistant housing through use of high-quality plastics (PC)
- Material is UV resistant, splash-proof and oil-resistant

Impulse Control (cycle sequence monitoring)

- Lights up when the energiser drops below the power limit – disrupted operation

Control display

- **Voltage display:** 6-step display to check the fence voltage
- **Earthing control:** Display for checking the earthing

Average fence terminal

- For paddocks and small pastures (output < 1 J)

Powerful fence terminal

- For large pastures

Earth terminal

Energy supply

230V AC

Dual energisers

Advantage: 2 in 1! Dual energisers can be connected in parallel to 230 V mains power and a 12 V battery. Uninterrupted operation is guaranteed in the event of a power failure.

Features

- Two fence terminals for operating one large and one small pasture or paddock
- Straightforward and visual information display – easy remote monitoring possible
- Tested and built according to the applicable EU directives and the safety standard EN60335-2-76 and DIN EN ISO 9001

Hanging device for wall mounting

Ventilation slots to allow discharge of condensation water

Voltage display

Earthing control

Pulse control

Safety advice: In 230 V operation, the energiser and the power supply unit should and must be installed in a room protected from moisture. Please also see the note on page 16.

Earth stake 1.5m (15017-1)

Lightning protection choke (15482)

Fence connection kit (15522C)

turbomax® Mains energiser 230 V

Extremely robust housing

- Particularly impact-resistant housing through use of high-quality plastics (PC)
- Material is UV resistant, splash-proof and oil-resistant

LED control display

- **Voltage display:** 6-step LED display to check the earthing and fence voltage
- **Alarm function:** Optical and acoustic alarm when the voltage drops below 400 ohms, the fence should be checked for faults or damage
- **2-stage CPN technology:** In the event of faults, higher energies are automatically fed into the fence (LED lights up red) after a safety margin of 55 seconds to ensure herding security
- **Power Control:** Shows the activity of the energiser and flashes in time with the pulse output
- **Impulse Control (cycle sequence monitoring):** Lights up when the energiser is in disrupted operation

Energy supply

Features

- Straightforward and visual information display – remote monitoring possible
- turbomax technology: for fence loads > 500 ohms the energiser works with an enormously high energy potential to reliably supply the fence
- Microprocessor control
- Tested and built according to the applicable EU directives and the safety standard EN60335-2-76 and DIN EN ISO 9001

Hanging device for wall mounting

turbomax® N1430

Fence tester turbomax (14151C), lightning protection choke (15482)

Solar energisers

The following horizon solar energisers have an integrated solar panel. This supports the 12 V battery in that it does not need to be recharged so often, as it is discharged more economically.

The solar support is a worthwhile investment in the long term, especially during the sunny times of the year.

The advantage of the solar energisers is that they are delivered fully assembled. The energiser is therefore immediately operational after the rechargeable battery has been fully charged. The components are matched to each other so that the energisers on the fence provide super performance.

trapper® Solar energisers

**2 YEARS
WARRANTY**

Ergonomic carrying handle

- Easy to move with one hand

Extremely robust housing

- Particularly impact-resistant housing through use of high-quality plastics (ABS)
- Material is UV resistant, splash-proof and oil-resistant

ON/OFF switch & Energy Control

- 3-stage LED control display for capacity and function of 9 or 12 V batteries
- Shows the activity of the energiser
- Flashes in time with the pulse output

TIP

Charge the battery before starting up!

Robust plastic solar panel

- Environmentally friendly use of solar energy
- Compact unit of energiser and solar panel

- Robust plastic solar panel
- Environmentally friendly use of solar energy
- Compact unit of energiser and solar panel
- Holding device for solar panel
- 4 different setting angles and a transport position
- Particularly sturdy housing, impact-resistant plastic with UV stabiliser
- Integrated earth stake
- Automatic switch-over in solar operation
- Solar charging control installed in the energiser is weather protected - easy charging of different types of 12 V batteries
- Microprocessor control
- Tested and built according to the applicable EU directives and the safety standard EN60335-2-76 and DIN EN ISO 9001

The devices can tip over, especially on uneven surfaces and / or in stronger winds. The U-earth stake ensures the safe set up of the devices even in windy conditions and on uneven ground.

The 3-level battery indicator shows the capacity and filling level of the battery. If the capacity should ever drop too much, e.g. out of season, the battery can easily be recharged.

The installed solar panels are notable for their high efficiency. This is demonstrated by the small surface area at the rated outputs of 20 and 30 watts. The devices are equipped with a solar charge controller.

The panels are placed on a plastic substrate and covered with a transparent plastic layer. For stabilisation, the panels are inserted into a plastic frame made of polycarbonate.

Energy supply

Before the electric fence system can be put into operation, the fence must be energised. There are a number of things to consider when choosing the right energy supply. A power supply for mains energisers is always ensured by connecting them to a mains. For 9 and 12 V energisers, it is important to select the right type of battery to match the power consumption. A supportive and, above all, sustainable use of solar panels is possible in order to guarantee the longest possible energy supply.

THINGS TO KNOW ABOUT

ENERGY SUPPLY

Before the electric fence system can be put into operation to protect animals, the fence must be energised by means of a power supply. There are a number of things to consider when choosing the right energy supply. A power supply for mains energisers is always ensured by connecting them to a mains. For battery-powered energisers, it is important to select the correct type of 9 or 12 V batteries for the corresponding energiser. A supportive and, above all, sustainable use of solar panels is possible in order to guarantee the longest possible energy supply.

1. ALKALINE AND ZINC-CARBON BATTERY (9 VOLT)

There are two different battery versions. Alkaline batteries on the one hand (so-called air-oxygen batteries) and zinc-carbon batteries on the other. Both battery versions supplied by horizont are mercury- and cadmium-free and therefore ecofriendly.

Alkaline battery

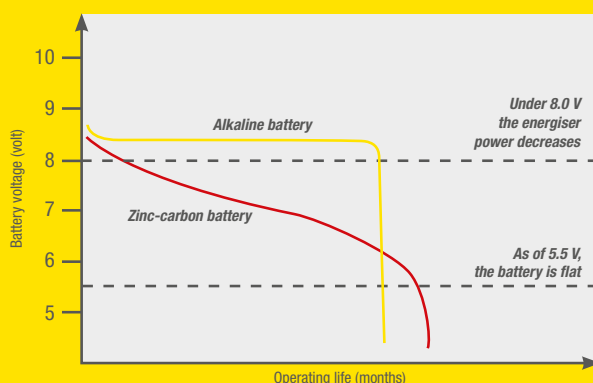

The special thing about alkaline batteries is the voltage curve. These batteries maintain a consistently high voltage for most of their operating life (see yellow curve in the graph below), thus guaranteeing a high level of herding security over the period of use – even when using powerful battery energisers.

The alkaline battery is only activated when it comes into contact with oxygen. Before connecting to the energiser, it is essential to completely remove the sticker on the lid of the alkaline battery to activate the oxygen contact.

Zinc-carbon battery

The voltage curve of zinc-carbon batteries continuously decreases throughout the operating life (see red curve in the graph below). As of a battery voltage of approx. 5.5 V, batteries are flat and must be replaced. Less powerful energisers are operated with a zinc-carbon battery. The steady voltage drop does not affect the important herding voltage in the fence at low power requirements.

**2. LEAD-FLEECE AND SPECIAL BATTERY (12 VOLT)**

horizont recommends the use of lead-fleece batteries or special batteries for energisers. Common car starter batteries (accumulators) are at a decisive disadvantage for use with energisers due to a high self-discharge rate. In addition, they are only cycle-resistant to a limited extent, i.e. they maintain significantly fewer charge/discharge processes.

Lead-fleece battery

The horizont lead-fleece batteries for 12 V energisers are filled. They have low self-discharge and very good cycle resistance. Lead-fleece batteries are completely sealed, preventing any leakage of liquids. In addition, the silicic acid inside is bound in fleece. There is also no need to refill battery acid. A horizontal or vertical position of the 12 V battery is irrelevant during transport and operation. Additional connecting cables do not need to be ordered to connect a horizont super-fleece battery; these are already included in the delivery.

Special 12 V battery

The special 12 V batteries from horizont are dry pre-charged. We recommend checking the acid level every four weeks. You can tell how high the acid level is by the min. and max. markings directly on the battery. The battery should be fully charged once before use, after which it can be easily connected to your energiser. The poles of your batteries should always be protected against the weather to promote operating life and prevent unwanted discharging. It is best to place your battery on a firm and level surface. For example, we recommend using a large-capacity battery transport box. This box can even accommodate your energiser; it can also be locked to protect the battery and energiser from theft. No additional connecting cables are required to connect your battery to your energiser; these are located directly on the horizont energiser.

TIP

- 9V batteries cannot be recharged: if your battery has a voltage of 5.5 V, it is flat and should be disposed of – each horizont battery can be stored for up to two years without any significant loss of capacity
- Each horizont battery is fitted with connecting cables - no additional accessories are required for connection to the energiser
- Charge your special or lead-fleece battery only with regulated chargers to guarantee a long service life - you will find optimal accessories here: 64.
- Make sure that the 12 V battery is well ventilated

Photovoltaic cells collect sunlight and convert it into electrical energy

The charging regulator integrated in the energiser protects against possible overcharging if necessary

The electrical pulse is conducted to the fence via the connecting cable

The battery stores the generated energy

3. SOLAR

Today, electricity is increasingly being generated with photovoltaics, which is a way of doing good not only for oneself but also for the environment. After all, generating electricity with a solar installation saves fossil fuels. Ultimately everyone can positively influence the ecological footprint. This very point of sustainability and environmental friendliness can also be applied to the additional use of horizon solar panels in combination with energisers.

All 50-watt solar panels from horizon have a practical charge regulator which automatically adjusts the voltage to prevent damage to the energiser and battery. The horizon range also includes other solar panels with different wattages. These solar panels have no integrated charge regulator. This is built into the energiser or is not required with the correct combination of solar panel and special 12 V battery.

Correct use of the solar panel

Alignment angle 45 degrees

No overshadowing from trees

No soiling or vegetation

To check your 12 V battery, first disconnect the solar panel and wait for 15 minutes before measuring the voltage on the battery. This ensures that you will measure the actual power of the battery – without support from the solar panel. If you measure the battery power in the dark, the solar panel can remain connected.

Your 12 V battery can be charged via the solar panel. A regulated charger should, however, be used to charge the battery for the first time - before it is put into operation or before the grazing season begins. You can never operate an energiser with just the solar panel alone. You must always connect a 9 or 12 V batteries as a buffer. Every 9 V and 12 V energiser from horizon can also be operated with a solar panel.

4. COMMISSIONING A SOLAR PANEL

Operation of an energiser with solar panel and battery

- The energiser can be operated during the day with sufficient sunlight via the solar panel
- Operation of the energiser at night via a connected 9 V battery
- Caution: The battery is not charged via the solar panel!

Operation of an energiser with solar panel and 12 V battery

- Operation of the energiser during the day with sufficient solar radiation via the solar panel and simultaneous charging of the connected 12 V battery
- Operation of the energiser at night via the connected 12 V battery

PRODUCT GUIDE

ENERGY SUPPLY

horizont recommends the following combinations or additions for an optimal solar solution:

Energiser	Energy		Solar panel	Accessories
	12 V battery	9 V battery		Solar bracket

WELL ADVISED ON BATTERIES

- Large and small battery casings fit in all 9 V battery energisers.
- Alkaline batteries guarantee an optimal herding voltage and should be used for high capacity battery energisers.
- Furthermore, every horizon battery is mercury- and cadmium-free!
- Our product guide as of will help you choose the right battery.

9 V alkaline battery turbomax®

- Suitable for:** • All 9 V energisers
- Advantage:** • High voltage curve throughout the entire operating life ensures optimum energiser function
- Storage:** • Up to two years
- Disposal:** • Included in price

DISTINGUISHED

The Danish magazine "Grene Kramp" took a close look at various manufacturers and checked the capacities of their batteries in a battery test.
The alkaline batteries of the turbomax® series from horizon have the best and clearest results in the conducted tests.

9 V zinc-carbon battery ranger®

- Suitable for:** • 9 V battery energisers
- Advantage:** • Inexpensive alternative to the common alkaline battery
• Zinc-carbon batteries have a lower voltage curve throughout their entire operating life than alkaline batteries
- Storage:** • Up to two years
- Disposal:** • Included in price

OPTIMISED CURRENT FLOW

Energisers need low current flows to function optimally. This is exactly the reason why common car starter batteries are not suitable for the operation of energisers, as they are designed for a particularly large current flow. As a result of the low current flow required by the energiser, car batteries would be subjected to high loads and their operating life shortened considerably. The 12 V special battery from horizon is designed for this low current flow and is therefore optimally suited for the power supply of energisers. It also guarantees an extremely long operating life.

12 V lead-fleece battery / AGM battery

- Suitable for:**
- Type 15842 and 12025: 9 V battery energisers
 - Type 14501: Energisers hotshock® ABN37 (10892), farmer® ABN30 (10891)
 - Type 14974: Energisers farmer® AN1000 (10855), ranger® AN2000 (10854), ranger® AN3000 (10992)
 - Type 14479: Energisers farmer® AN1000 (10855), ranger® AN2000 (10854), ranger® AN3000 (10992), ranger® AN4800 (10993)
- Advantage:**
- The horizon lead-fleece batteries have an extremely low self-discharge. When not in use, regular recharging of e.g. every 2 months is still recommended.
- Maintenance:**
- Maintenance-free
- Storage:**
- independent of location
- Charging:**
- To avoid damage, please charge only with recommended chargers (14864, 14863)
- Scope of delivery:**
- Connecting cable lead-fleece battery (90439C)

! Safe handling of 12 V batteries:
Please see the next page.

ADVANTAGES OF AGM BATTERIES:

- Long operating life and low self-discharge
- Maintenance-free (no refilling)
- Assembly possible in any position without leaking
- Excellent for hard-to-reach locations

SAFE HANDLING OF 12 V SPECIAL BATTERIES:

No smoking,
no open flames no sparks

Wear protective goggles

Sulphuric acid

Keep away from children

Observe
operating instructions

Explosive gaseous mixture

YOU WILL FIND DETAILED INFORMATION IN OUR SAFETY INSTRUCTIONS:

WWW.ANIMALCARE.HORIZONT.COM/SAFEHANDLING

Large capacity battery box

Suitable for:

- 12 V special battery 230 Ah (25012B)

Advantage:

- Can be locked with sufficient storage space for the energiser and battery
- Protection against weather and theft

Art. No.	Unit	EAN
21264	1	

Battery connecting cable

Suitable for:

- Connection of 12 V batteries
- Type 90501C: 9 V energisers to 12 V special 12 V batteries
- Type 90439C: 9 V energises to lead-fleece batteries
- Type 47BL1-2: energisers trapper® AN

Battery charging times:

15842	12 Ah	4 hrs.
12025	27 Ah	6.5 hrs.
14479	75 Ah	10 hrs.
14126	100 Ah	23 hrs.

Charger Charge Box 3.6 A

- Suitable for:**
- 12 V special batteries and lead-fleece batteries from 1.2 to 120 Ah
- Charging process:**
- Fully automatic and regulated
 - LED charge status display
 - Pulse/trickle/continuous charging
 - 230 V / 50 Hz operating voltage
- Protection:**
- Dust and splash-proof
- Scope of delivery:**
- Nylon bag
 - Adapter cables with battery clamps
 - Adapter cables with ring terminal end
 - Adapter cables with connector for cigarette lighter

Art. No.	Unit	EAN
14863	1	4 260173 030020

battery charging times:

15842	12 Ah	4 hrs.

Charger Charge Box 3.5 - 7.0 A

- Suitable for:**
- 12 V special batteries and lead-fleece batteries from 14 to 230 Ah
- Charging process:**
- Fully automatic and regulated
 - LED charge status display
 - Pulse/trickle/continuous charging
 - 230 V / 50 Hz operating voltage
- Protection:**
- Protection against dust, splash water, overheating and reverse polarity
- Scope of delivery:**
- Nylon bag
 - Adapter cables with battery clamps
 - Adapter cables with ring terminal end
 - Adapter cables with connector for cigarette lighter

Art. No.	Unit	EAN
14864	1	4 260173 030037

FAST & GENTLE CHARGING

The charger Charge Box 3.5 - 7.0 A is particularly powerful. The charging process is extremely fast and yet gentle on the battery and charger, as the Charge Box itself selects the appropriate amperage when charging. Furthermore, two 12 volt batteries can be charged at the same time.

Power supply unit 230 V for energisers

- Suitable for:**
- Dual and combi energisers (see Art. No. bottom)

LIGHT & HANDY: PLASTIC SOLAR PANELS

- Exclusively available at **horizont**: **Light, sturdy, shatter-proof and powerful plastic solar panels**
- For all battery energisers of all brands that have a solar charging regulator!
- Ground installation: with optional solar bracket
- Charge regulator: Not required; is installed in the recommended horizont energiser
- Solar panel material: monocrystalline

Lighter and easier to handle compared to panels of glass with aluminium frame. The aluminium frame can collide into something and vibrations can break the glass. Plastic is much more suitable for rough use in agriculture. The lightweight construction of the solar panel keeps the weight as low as possible.

Available in many sizes and designs!

Solar kit | 2 watt

- Suitable for:** • Energisers: trapper® B12 (10616), trapper® B22 (10620), older equiSTOP 9 V energisers
- Attachment:** • Solar kit is simply pushed onto the recessed grip of the energiser
- Scope of delivery:** • Complete with connecting cable (50 cm), aluminium frame and clip-on device
- Charge regulator:** • Not required, as the charge regulator is installed in the recommended horizont energiser or is not needed
- Material:** • Solar panel: monocrystalline, frame: Aluminium

 - Installation on portable or vandal proof box: with solar bracket (14143)
- Charge regulator:**
- Not required, as the charge regulator is installed in the recommended horizont energiser
- Material:**
- Solar panel: monocrystalline, plastic frame
- Scope of delivery:**
- 1 x solar panel with plastic frame and bracket, connecting cable 40 cm, 2 flat plugs

Art. No.	Length	Width	Height	Unit	EAN
14539	57.5 cm	39.0 cm	2.8 cm	1	4 014803 466365

Solar panel / 50 watts

- Suitable for:**
- Energisers: turbomax® AN800 (10749), hotshock® A300 (10613), ranger® AN490 (10857), ranger® AN4800 (10993)
 - Lead-fleece batteries up to 100 Ah
 - 12 V special battery up to 230 Ah
- Attachment:**
- Installation on e.g. wooden posts (14131): 2 x solar bracket (14143)
- Charge regulator:**
- Yes
- Material:**
- Solar panel: monocrystalline, frame: Aluminium
- Scope of delivery:**
- Complete with connecting cable, aluminium frame and charge regulator

Art. No.	Length	Width	Height	Unit	EAN
14873	55 cm	52 cm	2.5 cm	1	4 014803 148735

HIGH EFFICIENCY, NO OVERCHARGING

The particularly powerful 50-watt solar panel has a directly integrated and practical charge regulator. This special advantage protects the battery whilst charging by solar energy. Overcharging is not possible thanks to the charge regulator. In addition to its high efficiency, the solar panel also features efficient solar cells. There is no danger of injury from sharp-edged corners, these are protected by plastic covers.

Solar bracket with spoked post

- Suitable for:**
- 5 W solar panel (141451)
 - 10 W solar panel (14545)
 - 20 W solar panel (14536)
 - 30 W solar panel (14537)
- Attachment:**
- Fasten the retaining plate to the solar panel and metal rod with tread
 - Solar panel with the spoked post can be easily set up next to the energiser
- Material:**
- Post: galvanized iron
 - Retaining plate: Aluminium
- Length:**
- 62 cm

Art. No.	Unit	EAN
14923	1	4 014803 149237

Solar bracket

- Suitable for:**
- Electrifiable vandal proof box (14444)
 - Portable box (14906)
 - 5 W solar panel (141451)
 - 10 W solar panel (14545)
 - 20 W solar panel (14536)
 - 30 W solar panel (14537)
 - 50 W solar panel (14873)
- Inclination:**
- Inclination angle adjustable from 15 to 75 degrees
- Scope of delivery:**
- With mounting screws
- Material:**
- Aluminium

Art. No.	Unit	EAN
14143	1	4 014803 141439

Solar bracket

- Suitable for:**
- 5 W solar panel (141451)
 - 10 W solar panel (14545)
 - 20 W solar panel (14536)
 - 20 W solar panel (14538)
 - 30 W solar panel (14537)
 - 30 W solar panel (14539)
 - Energisers: farmer® AN100 (10855), ranger® AN2000 (10854)
- Attachment:**
- Simply fasten to the mounting points of the energiser and solar panel
- Material:**
- Aluminium, powder coated

Art. No.	Unit	EAN
14462	1	4 014803 144621

Solar bracket attachment device

- Suitable for:**
- Solar bracket with short spiked post 14907
 - Electrifiable vandal proof box (14444)
 - Portable box (14906)
- Attachment:**
- Simply screw on to the bracket, vandal proof box or portable box and attach the solar panel
- Material:**
- Iron, powder coated

Art. No.	Unit	EAN
14156	1	4 014803 141569

Solar bracket with short spiked post

- Suitable for:**
- 5 W solar panel (141451)
 - 10 W solar panel (14545)
 - 20 W solar panel (14536)
 - 30 W solar panel (14537)
- Attachment:**
- Fasten the retaining plate to the solar panel
 - The holder can be used for attachment to the attachment device (14156 or 14192)
- Material:**
- Post: Iron, galvanized
 - Retaining plate: Aluminium

Art. No.	Unit	EAN
14907	1	4 014803 149077

Solar bracket

- Suitable for:**
- Bracket (14907)
 - Older energisers: farmer® A1000, ranger® A3000
- Attachment:**
- Screw on bracket and attach the solar panel
- Material:**
- Iron, powder coated

Art. No.	Unit	EAN
14192	1	4 014803 141927

04

Earthing & control

The function of the electric fence is achieved through the deterrent effect of electrical impulses. The electric fence itself only represents a minor mechanical barrier. It is therefore very important to check the fence to ensure the function and the safety of the electric fence. Although it is an inconspicuous element, earthing is very important in the electric fence system. Only correct earthing guarantees optimum herding security.

- 80** | Guide

THINGS TO KNOW ABOUT

EARTHING & CONTROL

1. WHY IS EARTHING AT THE FENCE SO IMPORTANT?

The most important prerequisite to ensure optimum herding security as well as full energiser performance at the fence is proper earthing. The fence system is a circuit in which electricity flows.

CAUTION: It is not necessary to set up the fence in a circle to close the circuit because it is closed when touched by the animal. The current thus flows from the energiser through the conductors, the animal body (or vegetation) over the ground, through the earth stakes back to the energiser. Insufficient earthing means that less current flows and the deterrent effect on the animal is reduced. The danger: The animal escapes or enters the fenced area.

Closing the electric circuit with correct earthing

TIP: FAULT DETECTION

Connect long supply lines from the energiser to the fence in a branching box every 50-100 m. This can be easily opened and the cables checked for function by measuring the voltage. Troubleshooting is significantly simplified, especially for cables laid in the ground.

2. WHAT IS IMPORTANT TO PAY ATTENTION TO IN TERMS OF SOIL CONDITIONS?

Soil can have a very high resistance and significantly affect the herding security of the electric fence system. The goal is to minimise soil resistance, and this is achieved by good soil conductivity. Damp soil with good turf favours conductivity, while dry soil with little grass cover makes good earthing difficult. Difficult weather conditions, such as a layer of snow and frost, can also severely affect the earthing. If the ground is sandy, we recommend using an open or uninsulated earth conductor and earthing it at regular intervals. The more poorly the soil conducts, the more earth stakes should be used.

3. HOW DOES ONE EARTH AN ELECTRIC FENCE PROPERLY?

One or several earth stakes are inserted at least 1 m deep into the soil until they reach damp earth. When using several earth stakes, space them 3 m apart. The earth stakes are then connected to the energiser using high voltage cables and connecting cables. The number and depth of the earth stakes is crucial: The more and the deeper, the better.

CAUTION: Only use galvanised, rust-free materials for earthing, as a layer of rust will greatly impair the effect.

EARTHING CHECKLIST

- ✓ Energiser
- ✓ Earth stake
- ✓ Earth connecting cable & connection cable
- ✓ Fence tester

4. WHEN AND HOW IS EARTHING CHECKED?

Earthing reliability should be checked when the pasture is put to use in the spring and during the dry period in the summer. Also in the event of faults in the fence as well as after installation of a new energiser.

Certain measuring instruments or fence testers are used for this purpose. The test procedure is as follows: You produce a short circuit by placing iron posts against the electrical conductor about 100 m away from the energiser. Ensure good contact with the conductor and drive the post at least 30 cm into the soil. The fence voltage should now drop to 2000 V (1000 V for dry soil).

The earthing rod of the voltmeter is inserted into the soil about 1 m from the last earth rod of the energiser, and the measuring contact is held to the last earthing rod of the energiser. The value should be under 1000 V. Note: The smaller the value, the better. You should always check your fence system daily and look after your animals. Written documentation helps to prove that you checked.

5. WHICH SAFETY REGULATIONS MUST BE OBSERVED?

When earthing the energiser, a minimum distance of 10 m to other earthing systems (e.g. building earthing) must be maintained to prevent the voltage from flashing over (e.g. in the event of a lightning strike). This safety distance is important to avoid endangering the house earthing including water and power lines. The distance between the earthing of the energiser and the lightning protection should also be at least 10 m.

Excessive voltage (like a lightning strike) can destroy the energiser, the fence is no longer functional and the animal can escape. To prevent this, a lightning protection system should be installed between the energiser and the fence system. This is a requirement inside the building. It is considered a recommendation for installation outside buildings. It is particularly useful when using a mains energiser, as the current can flash over to the mains.

A so-called lightning protection choke effectively protects the energiser against damage caused by lightning and excessive voltages.

Fence tester Isotester 6000

- Advantage:**
- Simple and quick control of the fence system
 - Fence voltage display in 3 stages: 2,000 V, 4,000 V and 6,000 V
- Operation:**
- Without battery
- Scope of delivery:**
- Fence tester

Art. No.	Unit	EAN
14082C	1	4 014803 428684

Fence tester Flash 2000

- Advantage:**
- Optical function display in twilight and darkness
 - The device lights up in time with the current pulses and goes out under 2,000 V fence voltage
 - The measuring device does not require an earth terminal (is simply clipped into the existing fence material)
 - Additional deterrent for wildlife fences
- Operation:**
- Battery operation
- Scope of delivery:**
- Fence tester, 3 V lithium battery CR2032

Art. No.	Unit	EAN
14149C	1	4 014803 141491

Fence tester Neonlight

- Advantage:**
- Optical function display in twilight and darkness
 - In the design of a neon lamp with LEDs
 - The device flashes in sync with the current pulses and goes out under 2,000 V fence voltage
 - Additional deterrent for wildlife fences
- Operation:**
- Without battery
- Scope of delivery:**
- Fence tester

Art. No.	Unit	EAN
10424C	1	4 014803 405548

NEW Fence tester *trapper®*

- Advantage:**
- 6 recessed glow lamps for easy reading of voltage
 - Non-slip insulation of the earth stake - additional safety in operation
 - When not in use, the cable can be wrapped around the fence tester and the earthing rod can be fixed in place - easy handling and additional protection against damage
- Operation:**
- Operation without battery!
- Scope of delivery:**
- Fence tester

Art. No.	Unit	EAN
14494C	1	4 014803 144942

Fence tester *farmer®*

- Advantage:**
- 10 recessed LEDs – very good legibility even with strong light incidence
 - Recessed pushbutton prevents unintentional operation
 - Does not require earthing via an earthing cable
 - Battery control indicator
- Operation:**
- Battery operation (2* CR2016 3V lithium battery)
- Scope of delivery:**
- Fence tester and 2 batteries

Art. No.	Unit	EAN
14527C	1	4 014803 476562

Fence tester *ranger®*

- Advantage:**
- Digital display for accurate reading of the voltage
 - Device switches on automatically when fence voltage is applied
 - Non-slip insulation of the earth stake enables safe operation
 - Cable can be wrapped around the fence tester when not in use – easy handling and additional protection against damage
- Operation:**
- Battery operation
- Scope of delivery:**
- Fence tester, battery

Art. No.	Unit	EAN
14496C	1	4 014803 144966

Fence tester *turbomax®* Fence *scout*

- Advantage:**
- Measuring device for fence voltage, amperage and as fault finder
 - Measuring range up to 10,000 V
 - Display of current flow direction
 - Direction display of the fault
 - Display lighting
 - Acoustic signals
 - With battery control indicator
- Operation:**
- Battery operation
- Scope of delivery:**
- Fence tester, 9 V block battery, belt pouch

4 014803 154828

DOUBLE LIGHTENING PROTECTION

Energisers with two fence terminals also require two lightning protection systems.

Safety advice: To prevent lightning damage, an earthed lightning spark gap must be installed in the fence supply cable to the building, or prior to entry into a building. The lightning protection device must be installed by a specialist if the energiser is installed inside the building. The wiring must be carried out by a specialist according to the installation instructions. Do not combine lightning protection earth and operational earth of the electric fence system.

Lightning protection device

Suitable for:

Advantage:

Dimensions:

- Mobile battery and 12 V Battery energisers < 1 J
- Can be mounted to wall or on fence
- 12 x 6.5 cm

LUDA solar panel for FenceAlarm / 3 W

Suitable for:

- Luda FenceAlarm (38LUD1072)

Advantage:

- Charges the Luda FenceAlarm within one sunny day
- Luda FenceAlarm no longer needs to be removed for charging
- Sturdy frame and bracket
- Lightweight construction of solar panel and frame of plastic material
- Monocrystalline solar panels
- With swivel joint for ideal alignment to the sun
- **Alarm Plus function free for the first year!**

Art. No.	Unit	EAN

05 *Netting*

The construction of complete fences is greatly simplified with the use of netting. Posts, connectors and polywires are already installed in each net section. In addition, each net offers practical protection against predators and external intruders.

THINGS TO KNOW ABOUT NETTING

The horizon service for you:
Two year warranty on the
UV stability of all netting.

PREMIUM QUALITY
MADE IN GERMANY

All horizon netting are produced
in Germany, which is why they are
known for their *premium quality*.

1. THE FUNCTION OF NETTING

Netting consists of horizontal and vertical polywires. These polywires are made of monofilament plastic threads and the current-carrying polywires are additionally made of wires. A quality feature here is the number and thickness of the wires. With regard to plastic monofilaments, resistance to sunlight and mechanical strength also play a special role. horizon plastic monofilaments are therefore made of high-quality polyethylene (PE for short) with an additive for UV stabilization.

Special reinforcements of the vertical polywires, the plastic struts, can further increase the stability of the netting (for specific applications under increased weather conditions, such as wind and snow loads, as well as in uneven terrain). Various posts with different heights and thickness are also available to ensure optimal vertical fixing of the netting. There are various types of netting, depending on the application, which differ in the spacing between the polywires and the number and arrangement of the current-carrying polywires.

2. THE APPLICATION

As a livestock owner you can keep your animals in or out with a electric fence or an electric net. Animals that have a dense coat or plumage, such as poultry, sheep and goats, are ideally guarded with an electric net. Due to their size, small animals such as cats, dogs or rabbits can also be managed with netting. The same rule can also be applied when warding off wildlife or wolves. In this case, the horizon range offers optimal netting and polywire fencing solutions. The different types of netting are classified according to the different animal species into sheep/goat, poultry and small animal nets (rabbits, cats).

THE CONDUCTIVITY

The required herding pulse energy can be achieved through high electrical conductivity (of the polywires or wires). Each horizon netting type contains information on conductivity, e.g. the symbol A++, which stands for the highest conductivity.

When using netting on particularly dry soil, it is advisable to use netting with earth conductors. If the netting is touched by the animal in this case, the dry soil prevents the necessary transport of electrical pulse energy back to the earth connection of the energiser. The earth conductor of the corresponding netting

TIP

There should be no vegetation under the netting; vegetation should be removed before installation. Depending on the netting, the bottom current-carrying conductor is 5, 10 or 20 cm from the ground. This important conductor is therefore so close to the ground or vegetation as no other electric fence.

3. CHOOSING THE CORRECT POSTS

The posts can be selected according to soil conditions and preferences (single or double prong).

SINGLE PRONG

- Use on stony ground or in the mountains

DOUBLE PRONG

- Use on loose or firm stone-free ground
- The post can be anchored in the ground without tools thanks to the tread
- A double prong achieves a greater stability

The horizon posts are particularly stable. The post material is specifically optimised for multiple tensile loads that occur when pulling out net posts. The high strength and adapted elasticity, as well as the special connection technology of the post with the earth spikes, ensure a particularly long durability compared to conventional posts in mobile use.

The polywire insulator at ground level, which is located on the post-earth spike, ensures close contact with the spike. It therefore supports the conductivity of a net with an electrical earth wire. Using additional posts to press down the bottom wire strand in uneven soil conditions helps avoid an electrical connection of the live polywires. This also eliminates possible gaps which wild animals can use to slip through, for example.

4. CONNECTION TO AN ENERGISER

horizont offers special energisers for the herding of animals with an insulating coat of wool, hair or feathers. Since the netting is often set up well inside the vegetation, horizont energisers are designed for exactly such conditions.

5. THE ASSEMBLY AND DISMANTLING OF NETTING

CUTTING THE PASTURE AREA FREE

Why is it so important for the netting to have the pasture area cut free? The trimmed corridor under the set up netting prevents the first current-carrying polywire from being overgrown through vegetation. The vegetation cannot conduct energy away from the netting into the ground. If the first current-carrying polywires are free from vegetation, no energy will be lost from the fence.

POSTS

How do I choose the optimal post?

The broader surface of posts with double prong makes it easier to drive them into the ground. Yet the double prong is difficult to drive into stony ground. It is better to use a single prong here.

CORNER WITH POST

How does a corner solution work for the sheep net fence with additional posts? The additional post for the sheep net is necessary if there is no built-in post available in the corner. A "standard" plastic post can be used there, for example.

CONNECTING SHEEP NETTING

How is a net overlap created in sheep netting?

This is attached at points where the nets meet. This means the netting is properly stretched in parallel at this point in the resulting length. It is important that the designated cable ends of the netting is connected conductively.

CONNECTING SHEEP NETTING CONDUCTIVELY TOGETHER

How is the netting conductively connected at the two starting points?

Both of the cable ends of the netting are properly staked around the posts to eliminate unnecessary protrusion. Both clips of the ends are then connected without tools to establish a clean electrical contact on the fence.

SECURING SHEEP

How to deal with gaps between the netting and the ground due to ground depressions?

Lambs or even sheep could slip under the fence here. It is therefore important to check the sheep net fence! The netting can be stretched on the ground with the supplied stakes. This guarantees better herding security.

CONNECTING THE ENERGISER

The energiser should be connected to the connecting clips of the netting. This enables the best contact performance.

ROLLING UP SHEEP NETTING

The netting is picked up at the posts. The actual netting (wire strand) is then rolled up to the posts. The netting is tied together with the strings.

horinetz
Sheep and goat netting

- Suitable for:**
- Sheep and goats
 - Wolf deterrent and repelling of wild boars
- Bottom mesh size:**
- 15.0 cm high and 15.5 cm wide
- Advantages:**
- Good conductivity and extremely durable
 - High load rating possible
- Scope of delivery:**
- 1 x herding net horinetz complete
 - 14 plastic posts with single or double prong
 - 1 x repair kit, 1 x warning sign and 2 x ground stakes
- Accessories:**
- Replacement post with double prong Ø 13 mm, 90 cm high (15022-2), 105 cm high (15026-2) or 120 cm high (14384-2)

horinetz high energy
Sheep and goat netting

Suitable for:

- Sheep and goats
- Wolf deterrent and wild boar repellent

Bottom mesh size:

- 15 cm high and 15.5 cm wide

Advantages:

- Minimal leakage even with heavy vegetation due to non-current-carrying bottom polywires
- Good conductivity and extremely durable
- High load rating possible

Scope of delivery:

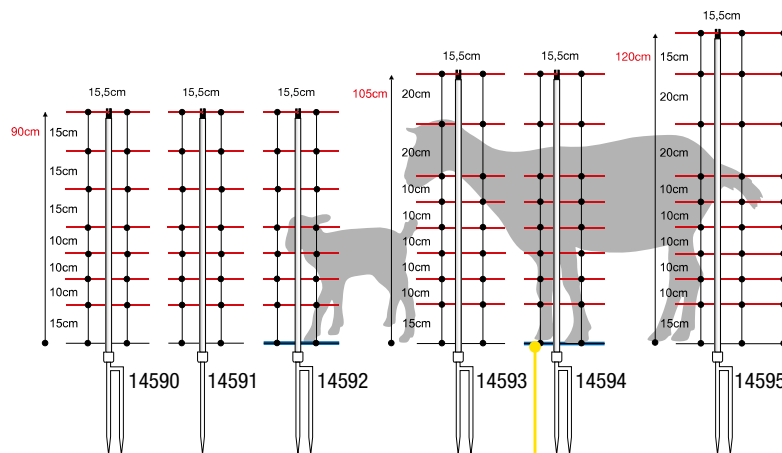

- 1 x heading net horinetz high energy complete
- 14 plastic posts with single or double prongs
- 1 x repair kit, 1 x warning sign and 2 x ground stakes

Accessories:

- Replacement post with double prong
Ø 13 mm, 90 cm high (15022-2), 105
cm high (15026-2) or 120 cm high
(14384-2)

**ONE OF THE MOST CONDUCTIVE

hotshock®

The hotshock® energisers are perfectly suited for use on herding nets!

turbomax® Extra
Sheep and goat netting

- Suitable for:**
- Sheep and goats
 - Wolf deterrent and wild boar repellent
- Bottom mesh size:**
- 10 cm high and 30 cm wide
- Advantages:**
- High stability through special vertical connections
 - Tight mesh spacing prevents lambs from breaking out
 - Professional netting with high conductivity – for more safety
 - White with black outside edges for more contrast to the surroundings and for better visibility
 - horizontal quality with high-quality copper conductor
- Scope of delivery:**
- 1 x herding net complete, 50 m long
 - 14 x plastic posts with single or double prong
 - 1 x repair kit, 1 x warning sign and 2 x ground stakes
- Accessories:**
- Replacement post with double prong Ø 13 mm, 90 cm high (15022-2) or 105 cm high (15026-2)

turbomax® Plus
Sheep and goat netting

- Suitable for:**
 - Sheep and goats
 - Wolf deterrent and wild boar repellent
- Bottom mesh size:**
 - 10 cm high and 30 cm wide
- Advantages:**
 - Both bottom polywires are not current-carrying - no discharge and so cutting free is not necessary
 - High stability through rigid verticals
 - Long operating life due to robust conductor material
 - White polywire with black outside edges for more contrast to the surroundings and for better visibility
 - horizontal quality with high-quality copper conductor
- Scope of delivery:**
 - 1 x herding net turbomax high energy complete, 90 cm high, 50 m long
 - 14 x plastic posts with single prongs
 - 1 x repair kit, 1 x warning sign and 2 x ground stakes
 - Connecting accessories
- Accessories:**
 - Replacement post with single prong Ø 13 mm, 90 cm high (14664)

Vertical
Sheep and goat netting

- Suitable for:
- Bottom mesh size:
- Advantages:
- Scope of delivery:
- Accessories:
- Sheep and goats
 - Wolf deterrent and wild boar repellent
 - 15 cm high and 15 cm wide
 - Twice the safety due to vertical current conduction - if a polywire breaks, the power supply is ensured
 - High conductivity for optimal herding security
 - High quality posts for high stability
 - horizont quality with high-quality copper conductors
 - 1 x herding net complete, 90 cm high, 50 m long
 - 14 x posts with single prongs
 - 1 x repair kit, 1 x warning sign and 2 x ground stakes
 - Replacement post with double prong Ø 13 mm, 90 cm (15022-2)

farmer® Sheep net 90 cm

- Suitable for:** • Sheep and goats
- Bottom mesh size:** • 15 cm high and 15 cm wide
- Advantages:** • Good conductivity and extremely durable
• Available with stable fibreglass or classic PVC posts
• Materials are rust-free and therefore extremely resistant
- Scope of delivery:** • 1 x sheep net complete, 90 cm high, 50 m long
• 14 x posts with single or double prong + 2 additional, non interwoven posts for individual use according to need
- Accessories:** • Replacement post with double prong Ø 13 mm, 90 cm (14663)

RECOMMENDED BY SHEEP BREEDING ASSOCIATIONS

WOLF DETERRENT FROM HORIZONT

THE CURRENT SITUATION AND OUR SOLUTIONS FOR YOU

Wolves have been detected in nearly all parts of Germany. The wolf has returned to wide parts of Germany. The delight over what we consider to be an extinct animal is clouded by the fact that it considers farm animals to be part of its diet. This is backed up by the sufferings endured by sheep and goat farmers across the country. This is where the electric fence comes into play, the development of which has been part of horizon's profession for decades. In several research projects in cooperation with the Saxon Sheep and Goat Breeding Association and the Baden-Württemberg State Sheep Breeding Association, horizon has developed reliable and particularly effective wolf deterrent systems to protect your farm animals. The netting has been extensively tested in practice and is recommended by the associations – for more safety on your pastures!

TURBOMAX HIGH ENERGY

The turbomax high energy netting is suitable for uneven terrain and mountains. Since the lower mesh spacings are particularly large, small wild animals can also slip through the netting and remain unharmed. Rigid verticals in the netting ensure solid stability. High energy in the netting is ensured due to a reduced number of horizontal polywires. The reduced number of horizontal polywires guarantees a particularly high conductivity with low energy consumption of the energiser.

HORINETZ SUPER PLUS

With the horinetz super with a height of 90 cm, a 20 mm wide tape can also be inserted at a height of 120 cm. The special construction can prevent the wolf from jumping over the net, as the movement of the tape in the wind irritates the wolf's field of vision and it cannot calculate its jump over the netting. UV-stable plastic posts in combination with double prongs ensure a secure stability, even in loose soil or in windy conditions.

HORINETZ SUPER

The horinetz super is an extra high special net as wolf deterrent with 145 cm height. In combination with further wolf deterrent measures, this high netting offers very good protection against the wolf and prevents attacks on your animals. The stable posts with a 19 mm post diameter ensure the secure stability of the netting. This ensures that your animals are safely and reliably fenced in.

horinetz super
Wolf deterrent netting

- Suitable for:**
 - Sheep and goats
 - Wolf deterrent and wild boar repellent
- Bottom mesh size:**
 - 15 cm high and 15 cm wide
- Advantages:**
 - Extra high special net for wolf defence with 145 cm height
 - High stability due to reinforced top and bottom polywires
- Scope of delivery:**
 - 1 x herding net wolf deterrent netting horinetz super complete, 145 cm high, 50 m long
 - 15 x plastic posts with double prongs
 - 1 x repair kit, 1 x warning sign and 2 x ground stakes
- Accessories:**
 - Replacement post with double prong Ø 19 mm, 145 cm high (14993)

horinetz super plus
Wolf deterrent netting

- Suitable for:
- Bottom mesh size:
- Advantages:
- Scope of delivery:
- Accessories:
- Sheep and goats
 - Wolf deterrent and wild boar repellent
 - 15 cm high and 15.5 cm wide
 - Recommended by the Saxon Sheep and Goat Breeding Association
 - Increased jump height through additional 20 mm tape at 120 cm height
 - Quick and easy assembly
 - High energy due to accompanying earth conductor
 - 1 x herding net wolf deterrent netting horinetz super plus complete, 50 m long
 - 15 x plastic posts with single or double prong
 - 1 x additional post 1.20 m for adaptation to ground contour
 - 1 x repair kit, 1 x warning sign and 2 x ground stakes
 - Replacement post with double prong Ø 13 mm, 90 cm high (15022-2, 15)
 - 20 mm tape (17111)
 - Earth stake for guying and earthing (15017-1)
 - Tape connecting cable (10447C)

WOLF CONTROL

A wolf deterrent system was developed together with the Saxon Sheep and Goat Breeding Association which is unique to date and has proven to prevent wolves from attacking farm animals.

Conductivity: **B**

Art. No.	Netting height	Netting length	Prong	Number of posts/ material	Colour of posts	Colour of netting	Horizontal polywires	Current-carrying polywires	Resistance	Unit	EAN
14992	90 / 120 cm	50 m	Single prong	15 / plastic	white		8	7	1.15 Ω / m	1	
14925	90 / 120 cm	50 m	Double prong	15 / plastic	white		8	7	1.15 Ω / m	1	

Anti-jump protection through additional tape

- Netting increased to 120 cm through 20 mm tape
- The movement of the tape irritates the wolf; it cannot calculate the jump

Posts with double prongs

- Posts are made of UV-resistant plastic
- Double prongs ensure secure stability even in loose soil or in windy conditions

High stability

- Top and ground polywires reinforced by more than 60 %

High energy due to accompanying earth conductor

Good visibility

- Yellow polywires are easier to see in twilight or darkness

turbomax® high energy
Wolf deterrent netting

- Suitable for:**
 - Sheep and goats
 - Wolf deterrent and wild boar repellent
- Bottom mesh size:**
 - 20 cm high and 30 cm wide
- Advantages:**
 - Due to large mesh spacing at the bottom, small wild animals can slip through and are thus protected
 - Rigid verticals ensure solid stability
 - Low weight – 10% lighter than conventional netting
 - Reduced number of horizontal polywires provides high energy due to less contact with vegetation
 - White with black outside edges for more contrast to the surroundings and for better visibility
- Scope of delivery:**
 - 1 x herding net turbomax high energy complete, 50 m long
 - 14 x plastic posts with double prongs
 - 1 x repair kit, 1 x warning sign and 2 x ground stakes
- Accessories:**
 - Replacement post with double prong Ø 13 mm, 90 cm high (15022-2) or 105 cm high (15026-2)

Connecting clip

Head insulator

Ground stake

The particularly high herding security is recommended by the Baden-Württemberg State Sheep Breeding Association. This sheep and goat netting was developed together with horizon.

turbomax® high energy plus earth Wolf deterrent netting

Suitable for:

- Sheep and goats
- Wolf deterrent and wild boar repellent

Bottom mesh size:

- 20 cm high and 30 cm wide

Advantages:

- Due to large mesh spacing at the bottom, small wild animals can slip through and are thus protected
 - Rigid verticals ensure solid stability
 - Low weight- 10% lighter than conventional netting
 - Reduced number of horizontal polywires ensure high energy
 - Additional earth conductor ensures good earthing even in dry conditions
 - White polywire with black outside edges for more contrast to the surroundings and for better visibility
 - horizontal quality with high-quality copper conductor
- ### Scope of delivery:
- 1 x herding net turbomax high energy plus earth complete, 105 cm high, 50 m long
 - 14 x plastic posts with double prongs
- ### Accessories:
- 1 x repair kit, 1 x warning sign and 2 x ground stakes
 - Replacement post with double prong Ø 13 mm, 105 cm high (15026-2)

The particularly high herding security is recommended by the Baden-Württemberg State Sheep Breeding Association. This sheep and goat netting was developed together with horizon.

TIP

A herd protection tape is the perfect supplement to a safe wild animal deterrent net.

Signal tape

Features:

- 80 mm wide
- 100 m on a roll
- blue / white

Advantage:

- Effective wild animal deterrent
- In a practical dispenser roll-off box

Art. No.	Unit	EAN
14622	1	4 014803 155672

NEW turbomax®
high energy braided
Wolf deterrent netting

Suitable for:

- Sheep and goats
- Wolf deterrent and wild boar repellent

Bottom mesh size:

- 20 cm high and 30 cm wide

Advantages:

- Braided polywire: Conductor braided into the PE monofilaments and thus very well protected and very high-tensile
- The braided strand will result in less tangles when pulling or while carrying (reduces wear and tear of the net)
- Earth conductors, which are a great advantage especially in dry conditions
- Braided polywire: and the rigid verticals ensure solid stability and a constant height
- Netting is easy to assemble as re-tensioning is not necessary
- Due to large mesh spacing at the bottom, small game can slip through and are thus protected
- Suitable for mobile and also semi-permanent netting (dismantled at irregular intervals, stands for several months)

Scope of delivery:

- 1 x herding net turbomax high energy plus earth complete, 105 cm high, 50 m long

- 14 x plastic posts with double prongs

- 1 x repair kit, 1 x warning sign and 2 x ground stakes

Accessories:

- Replacement post with double prong Ø 13 mm, 105 cm high (15026-2)

farmer® poultry netting with fibreglass posts 110 cm

- In many variants:**
- Electrifiable and non electrifiable!
 - 25 m or 50 m lengths
- Suitable for:**
- For poultry and other small animals
- Advantages:**
- Very good stability due to robust double prongs
 - Fast assembly of netting
 - Ideal for gardens or pastures – effective security netting
- Scope of delivery:**
- 1 x poultry netting, posts with double prongs, comprehensive repair kit
 - Including 2 additional non interwoven posts for individual use according to need
- Accessories:**
- Replacement post with double prong Ø 13 mm, 110 cm high (14662)

farmer® poultry netting with fibreglass posts 120 cm

- Suitable for:**
- For poultry and other small animals
- Advantages:**
- Enormous security due to electrifiable netting
 - Very good stability due to robust double prongs
 - Fast assembly of netting
 - Ideal for gardens or pastures – effective security netting
- Scope of delivery:**
- 1 x poultry netting, posts with double prongs, comprehensive repair kit
 - Including 2 additional non interwoven posts for individual use according to need
- Accessories:**
- Replacement post with double prongs Ø 13 mm, 120 cm high (14661)

Art. No.	Netting height	Netting length	Prong	Number of posts/ material	Colour of posts	Colour of netting	Horizontal polywires	Current-carrying polywires	Conductivity Q / m	Unit	EAN

ranger® Poultry netting 105 cm

- Suitable for:** • Chickens, turkeys, geese and ducks
- Bottom mesh size:** • 5 cm high and 7.5 cm wide
- Advantages:** • High conductivity for optimal herding security
• High quality posts for high stability
• Materials are rust-free and therefore extremely resistant
- Scope of delivery:** • 1 x poultry netting complete, 105 cm high, 50 m long
• 15 x posts with single or double prongs
- Accessories:** • 1 x repair kit, 1 x warning sign and 2 x ground stakes
• Replacement post with double prong Ø 13 mm, 105 cm high (15026-2)

ranger® security Poultry netting (not electrifiable)

- Suitable for:** • Chickens, turkeys, geese and ducks
- Bottom mesh size:** • 5 cm high and 7.5 cm wide
- Advantages:** • Tool-free connection of several nets
• High quality posts for high stability
• Without current-carrying conductors, no electrification possible
- Scope of delivery:** • 1 x poultry netting complete, 105 cm high, 50 m long
• Posts with single or double prongs
- Accessories:** • Repair kit, 2 x ground stakes
• Replacement post with double prong Ø 13 mm, 110 cm high (14662)

EVEN MORE FOR FEATHERED FRIENDS

Our animal husbandry catalogue offers the right range of products for poultry farming. Let our service team assist you.

Hotgate

Gate for electric fence netting

Ideally suited for keeping your animals such as geese, chickens, turkeys, sheep and dogs

Advantages:

- Electrifiable
- For electric fence netting up to 120 cm or 105 cm height (except item no 14697)
- Quick and safer passage to your pasture area
- Escape-proof protection thanks to smaller mesh size in the lower net area
- Firmly welded junctions & reinforced upper polywire
- Flexible use: Gate can be installed at any point of a net

Material:

Colour:

Scope of delivery:

- PVC posts with double prong
- Black
- Connection accessories

farmer® super / small animal netting

- Suitable for:** • Hares and rabbits
- Bottom mesh size:** • 5 cm high and 7.5 cm wide
- Advantages:** • High quality posts for high stability
• horizontal quality with high-quality stainless steel conductors
- Scope of delivery:** • 1 x herding net complete, 50 cm high, 25 m long
• 9 x posts with single prongs
• 1 x repair kit, 1 x warning sign and 2 x ground stakes
- Accessories:** • Replacement post with single prong with Ø 13 mm, 50 cm high (15223)

NEW Boundary net

Versatile for use in the garden, home, yard, camping or to protect your flower beds. Ideally suited for fencing in small areas or demarcating individual property areas!

- Small mesh spacing, continuous 17 x 17 mm
- Fibreglass posts ensure stability
- uncomplicated assembly and dismantling
- integrated tread: Posts are easy to push into the ground
- 90 cm high
- including comprehensive range of accessories: Stakes, guy ropes and clips
- Note: Not electrifiable

Boundary net Fix:

integrated fibreglass posts, extremely close post spacing approx. 1.8 m

Boundary net Flex:

Insert the posts exactly where you need them - a real advantage especially on uneven and in angled areas

Additional clip insulators for even more flexibility when assembling

Boundary net Fix:

Boundary net Flex:

NEW Barrier fence

Economical and effective fence suitable for

- Garden areas or camping sites
- To protect trees from animals
- Closing off streets or paths
- Separate smaller pets in the garden

Advantages:

- 1 m high, 50 m long
- Uncomplicated assembly and dismantling
- Light quality, 80 g / m²
- Also available as complete fence solution as a set with ten matching UVV metal posts in red
- Posts also available separately: 14706

Art. No.	Designation	Colour	Length	Height	Unit	EAN

Conductor material & Accessories

An optimal pasture situation consists of a well built electric fence. Tautly stretched and clearly visible conductor material is particularly important. The visibility of the conductor material for animals and humans is decisive for the herding security of the fence system. Attention should also be paid to a high conductivity to ensure a correspondingly high herding security.

THINGS TO KNOW ABOUT

CONDUCTOR MATERIAL & ACCESSORIES

Conductor materials must be highly conductive, tear-resistant and weatherproof. Good visibility can increase the effect and is essential for fleeing animals like horses. Due to the risk of injury, barbed wire should not be used as a fence conductor. Apart from the energiser, conductor material is one of the most important components of the fence system for mobile or permanent fencing. By choosing the right conductor, you can significantly influence herding security.

1. THE RIGHT CHOICE OF CONDUCTOR MATERIAL

Conductor materials can be plastic-metal mixtures or pure metallic materials - e.g. various electrifiable wires, these have the highest conductivity. Particular attention should be paid to the following values when selecting the conductor material:

The **RESISTANCE** is given in ohms / m. The lower this value, the higher the quality of the conductor material. High resistance values cannot be compensated even with powerful energisers!

The **BREAKING LOAD** is given in kilograms and indicates the maximum load (in kg) or tensile force the conductor material can withstand.

The **NUMBER AND THICKNESS** of the current-carrying conductors provides information about its conductivity. The more conductors and the thicker the conductors are in the conductor material, the more current is carried.

IN GENERAL: The better the electricity is transported in the fence, the longer fences can be built or the higher the herding voltage in the fence.

SEVERAL LEVELS IN THE FENCE:

When using several levels in the fence, the following should be noted:

- The total resistance of the fence system decreases with each additional level (conductor material) – but it is always smaller than the lowest resistance value of a level
- With fencing, the same conductor material should always be used on the different levels, as this guarantees optimum herding security – different conductor materials can also be mixed in the fence system under special conditions (e.g. in cattle farming)
- If the lowest level of the conductor material is covered with vegetation, the energy loss from the fence increases due to current leakage
- Ideally, the levels in the fence are free of vegetation, which has a positive effect on the maximum fence length
- For outdoor fencing, the use of conductor material with low resistance values is recommended – however, subdivisions in the fence or strip grazing can also be equipped with conductor material with higher Ω/m values due to their small size

RECOMMENDATIONS FOR DIFFERENT TYPES OF ANIMALS:

For different types of animals, horizon recommends different conductor materials and a certain number of levels* when building fences:

HORSES

horizon recommends fencing horses with 40 mm wide electric fence tape; horses are fleeing animals, and the wider the electric fence tape, the better it is perceived by the animals. This considerably reduces the risk of injury and escape of your animals!

CATTLE

horizon recommends fencing cattle with electric fence rope or polywire.

SHEEP AND GOATS

Sheep and goats can be fenced in locally with electric fence polywire. Alternatively, electric nets are also ideal for herding such animals.

POULTRY

horizon recommends fencing in poultry with electric nets.

WILDLIFE OR WOLF DETERRENT

horizon recommends securing corn fields or forest areas against wild boars with electric fence tape or rope. For wolf deterrent and for the protection of sheep or goats, horizon recommends the use of special wolf deterrent netting.

2. MALFUNCTIONS AT THE FENCE

The above diagram illustrates the malfunctions that can be caused by vegetation at the fence, for example. Consequently, the fence should always be kept in proper condition, the fence voltage should be checked regularly, the fence should be kept free of vegetation and connectors should be used if a conductor breaks. This will increase the durability of your fence and the safety of your animals will not be reduced by avoidable defects in the fence. The fence gains stability.

Conductor material attached to wood posts, often resulting from incorrectly attached insulators, can also influence the current flow. The conductor material should always be run in appropriate insulators.

3. TIPS FOR HANDLING CONDUCTOR MATERIAL

If the conductor material is torn, use suitable accessories such as connectors to restore the herding security. If the conductor material is sagging and needs to be re-tensioned, use the appropriate tensioners to keep it properly at height again. Do not wrap the conductor material in the dry room of the insulators; this can cause spark-overs on the support of the insulator.

In winter, water accumulation can cause the conductor material to be significantly heavier and sag. If you do not use your pasture in winter, dismantle your fence. A recommended method for easy and practical storage of the conductor material is to wind it onto reels. This allows for direct storage and the use of reels also makes it easier to reassemble the fence in the spring.

Do not knot the conductor material, as a constant current flow in the fence is no longer guaranteed in this case. Instead, use suitable connectors from horizon.

In areas particularly exposed to the wind, electric fence tapes should be twisted when tensioned, as this reduces the surface area exposed to gusts of wind and increases the stability of your fence.

4. DIFFERENT LEVELS OF QUALITY

Various technologies were developed for the horizon conductor material to make it even more conductive. The different resistance values are decisive here:

TLDmax TECHNOLOGY	<i>turbomax®</i>	0.08 - 0.17 Ω / m
TLDmax TECHNOLOGY	<i>ranger®</i>	0.20 - 0.53 Ω / m
TBmax TECHNOLOGY	<i>hotshock®</i>	0.24 - 0.53 Ω / m

THE CONDUCTIVITY:

The required herding pulse energy can be achieved through high electrical conductivity. Each horizon conductor material type contains information on conductivity, e.g. the symbol A++, which stands for the highest conductivity.

TIP:

Your fence system should have stable corner and intermediate posts which simultaneously tension the electric fence tape and keep it at height. This keeps it straight and parallel to each other.

ELECTRIC FENCE TAPES

horizont electric fence tapes are available in different series, which are characterized by the maximum fence length. horizont offers the appropriate electric fence tape for every individual application. When choosing the conductor material, pay attention to width and colour for optimum herding security.

Maximum fence lengths: The length specifications show the maximum possible fence length of a level without vegetation with an appropriately strong energiser.

turbomax® electric fence tapes

Cross-connections ensure the consistent flow of current and optimum current conduction.

Bundled **TLD_{max}** - conductors ensure highest conductivity and high current flow.

Polyethylene threads ensure maximum durability and high breaking loads.

Electric fence tape trapper®

- Suitable for:**
- Short fences and strip grazing
- Advantage:**
- Monofilaments with high UV stability
 - Stainless steel conductor for good conductivity and highest bending strength
- Colour:**
- White: for more contrast to the surroundings and increased visibility in twilight and darkness

ELECTRIC FENCE ROPE

horizont electric fence ropes are available in different series, which are characterized by the maximum fence length. horizont offers the appropriate electric fence rope for every individual application. When choosing the conductor material, observe the diameter and colour for optimum herding security.

Maximum fence lengths: The length specifications show the maximum possible fence length of a level without vegetation with an appropriately strong energiser.

- The counter-rotating stranding ensures a high stability of the electric fence rope.
- Individual strands are arranged so that they are well twisted into the rope. This ensures a safe spark-over.
- Due to the complex stranding process, wires are always clearly visible and offer a high contact surface.

Electric fence rope farmer®

- Suitable for:** Short fences and strip grazing with little vegetation
- Advantage:** 462560: The elasticity of the horizont fence rope makes it ideal for use on pasture gates in combination with gate handles
- Colour:** White: for more contrast to the surroundings and increased visibility in twilight and darkness

Art. No.	Designation	Diameter	Reel	Max. fence length*	Breaking load	Number of conductors	Ø Stainless steel conductor	Resistance	Colour	Unit	EAN

TIP:

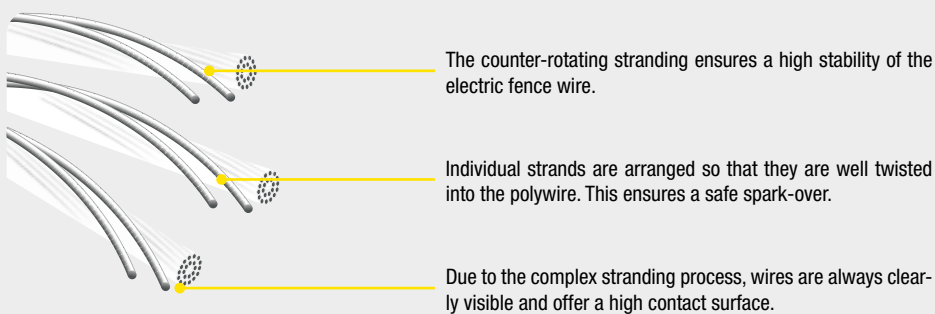

horizontal electric fence polywires are particularly lightweight and can therefore be easily tensioned and installed. The low weight allows large distances between posts in the fence system.

ELECTRIC FENCE POLYWIRE

horizontal electric fence polywires are available in different series, which are characterized by the maximum fence length. horizont offers the appropriate electric fence polywire for every individual application. All horizontal electric fence wires are clearly visible at twilight, which is important due to the small diameter.

Maximum fence lengths: The length specifications show the maximum possible fence length of a level without vegetation with a correspondingly powerful energiser.

Electric fence polywire trapper®

- Suitable for:** • Short fences and strip grazing
Advantage: • Simple quality optimal for the hobby sector
Colour: • Yellow/ orange: good visibility for animal and human

TIP:

Electric fence wires are particularly suitable for electric permanent fences installations. horizontal electric fence wires are characterized above all by their high conductivity and durability.

ELECTRIC FENCE WIRE

horizontal electric fence wires are available in different series, which are characterized by the maximum fence length. horizontal offers the appropriate electric fence wire for every individual application. For optimum herding security, observe the diameter and processing (solid or coiled wire) when choosing the conductor material.

Original control wire

Steel wire

Stranded wire

Permanent fencing GALVADUR

Maximum fence lengths: The length specifications show the maximum possible fence length of a level without vegetation with a correspondingly powerful energiser.

Electric fence solid wire

horizontal offers electric fence solid wires with different diameters and highest conductivity. They are very easy to shape, are corrosion resistant, easy to process, enormously resilient and suitable for long fences.

The electric fence polywire consists of many different individual, e.g. galvanized wire strands. It is easy to process, is suitable for long fences and is particularly tear-resistant.

Electric fence stranded polywire

Electric fence wire | Original Control Wire

- Suitable for:** • Short to medium fence lengths
- Advantage:** • Safe voltage transition to the animal
• Plastic core ø 1.5 mm
• Wrapped with 2 special conductors (galvanized iron wire)
- Material:** • Iron

"Original Control"

14356	Electric fence wires	galvanized metal	10	4 014803 143563

Electric fence wire connector and tensioner Gripple

Application:

- Can also be used as wire tensioner
- 4 times faster than knotting or such
- Holds tension for a long time and is easy to re-tension
- Easy to mount with Gripple tensioning tool with tension meter (15962)

Art. No.	Suitable for	Diameter	Material	Unit	EAN
15967	Electric fence solid wires	1.4-2.2 mm	galvanized	20	5 038006 020703
47GRIP0001	Electric fence solid wires	2.0-3.25 mm	galvanized	20	5 038006 020710

Electric fence rope tensioner

Application:

- Tensioner can be mounted directly into the fence material at any point of the fence

Advantage:

- Complete with locking bracket

Art. No.	Suitable for	Diameter	Material	Unit	EAN
15937C	Electric fence ropes and wires	1-8 mm	Aluminium	2	4 014803 405463

13043	Mounting part, single	1	4 014803 130433

TIP

For the assembly and dismantling of fences with four to five levels, you can use two post stands with mounted reels next to each other.

Reel with mounting part on wood post

Reel with mounting part on steel post

Mounting part single on steel post

Reels mounted on steel post

07

Posts

Every fencing system needs suitable posts to be firmly anchored in the ground and to withstand any weather situation. A fence that is securely stable is just as important for mobile fencing as for permanent fencing. The herding security of a fence system is decisive for the protection and safety of the animals to be fenced in – the right choice of corner post is particularly important here, as it must bear the high tensile forces of the fence system.

THINGS TO KNOW ABOUT

POSTS

1. WHAT ARE THE DIFFERENT PURPOSES OF POSTS?

CORNER AND GATE POSTS

Corner and gate posts are usually made of wood or recycled material. They are used when the fence direction changes significantly, for example, if you need to integrate a change of direction / corner (more than 30 degrees) into your fence system. Plastic posts cannot sustain the high tensile forces of the fence system as corner posts and are therefore unsuitable for this area of application. Sturdy wood posts are useful; when assembling a corner, make sure you also use the right accessories; use insulators for wood and recycled posts from horizontal. Wood posts are also suitable as intermediate posts for long, straight fence sections; in this case, we recommend using them to make the fence system sufficiently stable and secure. If you integrate a gate into your fence, you should also position stable posts at the end of the fence/gate since the last post must bear the tensile force of the fence at the gate.

Regardless of whether you integrate a corner or gate into your fence system, the posts must be anchored deep in the ground to provide sufficient stability in the fence system. The more forces a post must withstand, the deeper it must be anchored in the ground and the larger the post diameter must be.

TIP: Corner, gate and intermediate posts are best anchored in the ground using an earth auger and a post rammer and should be twice as long as the fence is high.

TIP: TILTING POSTS?

Do your posts often tip over? This would pose a high risk for you as a livestock owner and your animals. Line posts have only limited grip in the ground. The correct use of corner posts is therefore important, as they keep the tension secure and stable from corner post to corner post. For plastic posts, a wide and long earth spike is suitable for a better grip in the ground.

Example fence with corner/gate posts
e.g. made of wood (brown), line posts
e.g. made of plastic (white) and posts
for changing direction e.g. made of
recycled material (grey)

Corner situation
from the side view
and top view

POSTS FOR CHANGING DIRECTION

If the direction of your fence changes (at an angle of 20 to 30 degrees), the post used to change direction need not be as strong as a corner or gate post. The forces acting on the post under this low inclination are not very strong. These poles should also be used in depressions or hills. The most suitable posts for this purpose are those that can be anchored in the ground, such as wooden posts. Recycled plastic posts from horizontal are an inexpensive alternative.

LINE POSTS

The function of the line posts is to keep the conductor material at a constant height. The wider the conductor material is (especially when using tapes), the closer together the posts must be positioned. In wind-prone areas, more posts should be placed along one section of the fence to ensure that the fence is stable enough. The utilised conductor material becomes heavier in heavy rain or even in winter, as it absorbs more moisture. This increased weight is not without risk for the herding security in the fence and should be taken into account. To avoid failures or voltage drops, provide a sufficient number of posts in your fence system as a preventive measure. The choice of the appropriate line post differs depending on whether you own a stationary fence or want to build a mobile fencing. For permanent fencing we recommend wood or recycled plastic posts. When utilising mobile fencing, you should use plastic, fibreglass or angle steel posts.

2. HOW HIGH AND HOW FAR APART MUST POSTS BE?

The height of your electric fence depends on the type of animal to be herded. Above all, the size of your animals and their jumping characteristics should be taken into account. If you also keep young animals in the pasture, your fence must be extended downwards. As a general rule, the wider or heavier the conductor material, the closer together the posts must be in wind-prone regions. The distances also differ from the conductor material used.

TIP

When using plastic posts as line posts, you can easily transfer the heights for the insulators to the corner posts or posts for changes of direction by placing the plastic post in the ground next to the wood or recycling plastic post and transferring the height of the eyes to it.

3. HOW DOES THE INTERACTION OF POSTS AND FENCE LENGTHS WORK?

The following table helps to calculate fence lengths and the number of posts required. It is important to note that stable posts should be used for each corner and gate and where there are major changes in direction or depressions and hills.

Area	Examples of side lengths	Fence length
2,500 m ² / 0.25 ha	50 m x 50 m	200 m
5,000 m ² / 0.5 ha	71 x 71 m	284 m
7,500 m ² / 0.75 ha	87 x 87 m	348 m
10,000 m ² / 1.0 ha	100 x 100 m	400 m
15,000 m ² / 1.5 ha	122 x 122 m	488 m
20,000 m ² / 2.0 ha	141 x 141 m	564 m
30,000 m ² / 3.0 ha	173 x 173 m	692 m
50,000 m ² / 5.0 ha	224 x 224 m	896 m

EXAMPLE SITUATION: HORSE PASTURE AT THE EDGE OF THE FOREST WITHOUT TERRAIN

This pasture measures 306 m and includes a gate and must also bypass a large boulder. Therefore 6 stable corner posts are needed. For some of the long distances between the posts, line posts should be placed at intervals of 3 m, which keep 3 levels of wide tape at the same height. For a fence length of 300 m you will need 100 line posts, but this does not include the length of the gate (6 m below the boulder here).

PLASTIC POST LONG LIFE - A GOOD CHOICE!

- Very high durability – made of a high-quality special plastic, therefore frost-proof
- No seams, as the post is cast in one piece

- Insulators can be individually adjusted in number and height
- Post is sealed at top – water cannot enter

Plastic post turbomax®

- Transposed twist-free profile
- Cast from one mould

PRODUCT TIP

Insulators are particularly suitable for screwing or clamping / clipping

15481

15480

Plastic post long life

- A strong, galvanised tread frame provides good stability in hard ground and enables easy insertion into ground
- Continuous welding of the post instead of spot welding makes the earth spike stable

- Eyes are opposite tread – free area for better insertion
- Additional insulator at base of post for insertion of earth conductor for better herding security
- An additionally reinforced and rounded tread frame with fluting ensures a firm tread

PLASTIC POST TURBOMAX® SMART POST - WITH STRONG ADVANTAGES:

Cross-ribbing in post provides stability, so it can be subjected to higher tensile forces and is difficult to bend

An **additionally reinforced and rounded tread** frame with fluting ensures a firm tread and prevents accidental slipping off

Two insulators at the post tip ensure optimum utilisation of the post length when using polywire, rope or tape up to 40 mm

The **numbering** of the eyes simplifies fence assembly, especially for large pastures

A stable, extra thick galvanized earth **spike** (9 mm diameter, 23 cm length) injected into the post guarantees high durability and ensures secure stability

Plastic post turbomax® smart post

- Of high-quality polypropylene with improved stability and impact resistance
- The shape of the post is based on high, tapered towers; this form provides particularly good stability
- Various designed, extremely stable eyes for tapes, ropes and polywires, suitable for any fence material

T-post ECO

Very robust posts of recycled material, durable and resilient!

The ECO T-post is manufactured from recycled grade ST42 steel and is lacquered. The anchor plate extends across three "knobs", which gives the post a good hold even in soft soils. A wide variety of insulators can be attached to the T-profile to accommodate the desired conductor material. This makes the post suitable for wire, rope, polywire and wide tape.

Eyes suitable for: • Wide tape up to 50 mm, rope up to 6 mm

Weight: • 2.7 kg

Please note: Sold only by the pallet!

Insulators

Sufficient herding voltage is of great importance for the operation of a electric fence. The insulators should have a very high insulating capacity as they insulate the conductor material against the post and the earth. The current flow is prevented between earth and fence and the required herding voltage is only applied in the fence material.

THINGS TO KNOW ABOUT INSULATORS

There are countless fence variants and a suitable insulator is available for nearly every variant. To make it easier to choose the optimal accessory, some criteria should be considered when choosing an insulator.

1. IS THERE A SPECIAL FENCING SITUATION YOU NEED TO MASTER WITH YOUR INSULATOR?

1 SECTION/ GUIDE INSULATOR

Section or guide insulators always keep the conductor material at a constant height. The conductor material is guided close to the fence post which makes the fence particularly stable. In addition, their small surface area prevents animals from leaning against or touching the insulators and possibly bending them.

2 CORNER INSULATOR

If you want to build a corner in your fence, we recommend using so-called corner insulators. These can be screwed to the inside of the post. Corner insulators are particularly stable and usually have a metal support inside the insulator which absorbs the tensile forces from the conductor material. As a result, the fence is stable and will not collapse in strong gusts of wind, for example.

3 SPACER INSULATOR

Spacer insulators are less tightly fitted than section /guide insulators, as the guide of the conductor material is further away from the screw-in point of the insulator. They still guarantee good herding security. The use of these insulators prevents direct contact between the animal and the fence. This prevents the animals from leaning against fence posts, for example, and enables the fence to last longer. Spacer insulators are also used to protect solid wood fences, as the animals do not nibble at the wood.

4 STRAIN INSULATOR

Strain insulators are used at the start and end of a fence section or in corners. They are particularly suitable for use with ropes (with a diameter of up to 8 mm) or wire.

NOTE

If you want to fence in animals, attach the spacer insulators on the inside of the pasture. If you want to fend off animals, fasten the insulators on the outside of the pasture.

2. WHICH CONDUCTOR MATERIAL MUST THE INSULATOR CARRY?

Depending on the type of animal to be fenced in you have selected the appropriate conductor material for your fence. The horizontal range carries insulators for tapes, ropes, polywires and wires. There are even insulators that can carry more than one conductor material. Combined insulators are also available for special application situations; these enable you to install tape, rope or polywire in just one insulator.

Always use the appropriate insulator for your conductor material. Never attempt to install a rope in a ring insulator. Ring insulators are suitable for polywires. Otherwise you are in danger of damaging the conductor material and risk weakening the herding security of the fence system.

3. SHOULD THE CONDUCTOR MATERIAL IN THE INSULATOR RUN FREELY OR BE FIXED?

Conductor material is usually fixed in places where strong wind can occur. The conductor material can be fastened by closing the insulator or by using a screw. These variants enable the tight fit of the conductor material. Insulators with free-running conductor material are used for stable corner posts or as section/guide insulators. The advantage is that the conductor material can be stretched over long distances because it can move freely in the insulator. If fixed insulators were to be used, the conductor material would have to be readjusted on each individual insulator.

Tape runs free!

Tape is fixed!

4. HOW IS AN INSULATOR MOUNTED?

Important: Always select the appropriate insulator in relation to your post. The Product Guide will help you here:

SCREW IN

If insulators are to be fastened in wood, plastic or on stone walls, use insulators that can be screwed in, bolted, nailed or fastened with a special staple. The horizon range includes special insulators with a unique screw thread for screwing into e.g. wood posts. This special thread prevents annoying splintering of the wood post. For you, the time-consuming process of pre-drilling or countersinking is no longer necessary. Because of the low splintering of the wood – after the insulator has been attached – an extremely secure fit can be guaranteed and herding security be established in your pasture.

SCREWING / NAILING

If you prefer insulators without support, it is best to use insulators that can be nailed or fastened with special staples or screws. These are best attached to wood posts. Insulators with separate metric thread can – in addition to materials such as wood, plastic or stone – also be easily attached to drillable materials such as metal. Just as with the insulators for screwing in, a securely tight fit on the post is possible here.

CLAMPS

Depending on the type of post you use, we also carry insulators for clamping, clipping or inserting. No additional tools are necessary for installation. The insulators can be mounted directly on the post very quickly and easily.

Tape insulator / corner 40

- Suitable as:** • Section insulator, starting/corner insulator
- Conductor material:** • Tape up to 40 mm
- Fastening:** • Nailing or screwing to wood or recycled posts with at least two 5 mm screws
- Advantage:** • Conductor material cannot "fall" out of the insulator even when it is not under tension
- Application:** • Free running
- Material:** • Galvanized
- Scope of delivery:** • Screws

Art. No.	Unit	EAN
15297	5	4 014803 152978

Tape insulator / corner 40 plus

- Suitable as:** • Starting/corner insulator
- Conductor material:** • Tape up to 40 mm
- Fastening:** • Nailing or screwing to wood or recycled posts with at least two 5 mm screws
- Advantage:** • Conductor material cannot "fall" out of the insulator even when it is not under tension
• Easy re-tensioning possible
- Application:** • Fixed
- Scope of delivery:** • Screws, bracket

Art. No.	Material	Unit	EAN
15299	galvanized	5	4 014803 152992

Tape insulator / combi 40

- Suitable as:** • Section insulator, spacer insulator
- Conductor material:** • Tape up to 40 mm, polywire up to 4 mm, rope up to 8 mm
- Fastening:** • Screwing in to wood or recycled plastic posts
- Advantage:** • Large dry room = High insulation
- Application:** • Free running
- Support:** • Short, Ø 6 mm

Art. No.	Unit	EAN
15828C	10	4 014803 158284

COMBI40GREEN

TAPE INSULATOR

- Suitable as:** • Section insulator, starting/corner insulator
- Conductor material:** • Tape up to 40 mm, polywire up to 4 mm, rope up to 8 mm
- Fastening:** • Screwing in to wood or recycled plastic posts
- Advantage:** • Large dry room = High insulation
- Application:** • Free running
- Support:** • Short, Ø 6 mm

NEW & GREEN

Art. No.	Colour	Unit	EAN
14668	green	30	4 014803 146687

Tape insulator combi 40

- Suitable as:** • Section insulator, starting/corner insulator
Conductor material: • Tape up to 40 mm, polywire up to 4 mm, rope up to 8 mm
Fastening: • Screwing in to wood or recycled plastic posts
Advantage: • Large dry room = High insulation
Application: • Free running
Support: • Short, Ø 6 mm

Art. No.	Colour	Unit	EAN
15682	black	30	4 014803 156822

Tape insulator ranger® 20

- Suitable as:** • Section insulator, spacer insulator
Conductor material: • Tape up to 20 mm, polywire up to 4 mm, rope up to 8 mm
Fastening: • Screwing in to wood or recycled plastic posts
Advantage: • Because of the lateral ground position, the tape cannot "fall" out of the insulator unintentionally, even if guided over hill and dale
Application: • Free running
Support: • Short, Ø 6 mm

Art. No.	Unit	EAN
15186	10	4 014803 151865

Tape insulator ranger® 40 fix

- Suitable as:** • Section insulator
Conductor material: • Tape up to 40 mm, rope up to 8 mm
Fastening: • Nailing or screwing to wood or recycled plastic posts
Advantage: • Strongly interlocked closure support on tape, which provides a secure hold
Application: • Fixed

Art. No.	Unit	EAN
14990	25	4 014803 149909

Tape insulator ranger® 20

- Suitable as:** • Section insulator
Conductor material: • Tape up to 20 mm, polywire up to 4 mm
Fastening: • Screwing in to wood or recycled plastic posts
Advantage: • Closure support creates secure hold
Application: • Free running
Support: • Short, Ø 5 mm

Art. No.	Unit	EAN
15555-25	25	4 014803 408365

Tape insulator ranger® 40

- Suitable as:** • Section insulator
Conductor material: • Tape up to 40 mm
Fastening: • Nailing or screwing to wood or recycled plastic posts with two 5 mm screws
Application: • Fixed
Scope of delivery: • Plastic screws

Art. No.	Design	Unit	EAN
14161C	without rubber insert	8	4 014803 141613
14162C	with rubber insert	8	4 014803 141620

Tape insulator ranger® 40

- Suitable as:** • Section insulator
Conductor material: • Tape up to 40 mm, polywire up to 4 mm
Fastening: • Nailing or screwing to wood or recycled plastic posts with two 5 mm screws
Advantage: • Opposing clamps prevent the tape from "falling out" even in hilly terrain
Application: • Free running

Art. No.	Unit	EAN
15460C	20	4 014803 405401

Tape insulator turbomax® plus

- Suitable as:** • Section insulator, starting/corner insulator
Conductor material: • Tape up to 40 mm, polywires up to 4 mm, rope up to 8 mm
Fastening: • Nailing or screwing to wood or recycled plastic posts with two 5 mm screws
Application: • Fixed

Art. No.	Design	Unit	EAN
15843C	with connecting plate can be used as gate handle insulator	1	4 014803 405470
15837C	without connecting plate	4	4 014803 405449

YOUR ADVANTAGE:

- This design is unique on the **market** and offers many advantages.
- The insulator can be opened and **closed very easily**.
- The screw is **fixed firmly** to the insulator so that it can be swivelled, making installation child's play.
- The non-rusting metal connecting plate can even be fitted with a **gate handle**.
- And **fence branches can also be easily created**.

Rope insulator farmer® corner plus

- Suitable as:** • Starting/corner insulator
Conductor material: • Polywire up to 4 mm, rope up to 8 mm
Fastening: • Screwing in to wood or recycled plastic posts
Application: • Free running
Support: • Short, Ø 7 mm

Art. No.	Design	Unit	EAN
100121-10	with wide support bottom	10	4 014803 440679

Rope insulator turbomax®

- Suitable as:** • Section insulator, starting/corner insulator
Conductor material: • Polywire up to 4 mm, rope up to 8 mm, wire up to 2.5 mm
Fastening: • Screwing in to wood or recycled plastic posts
Advantage: • Ergonomic shape for optimal handling
Application: • Free running
Support: • Short, Ø 6 mm

Art. No.	Unit	EAN
15835C	18	4 014803 405425

Rope insulator turbomax® metric

- Suitable as:** • Section insulator, spacer insulator
Conductor material: • Polywire up to 4 mm, rope up to 8 mm
Fastening: • Screwing in through holes of e.g. metal posts
Advantage: • Large dry room = High insulation
Application: • Free running
Support: • With metric thread M6, Ø 6 mm

Art. No.	Unit	EAN
15073C	8	4 014803 405395

Rope insulator flexibar 400 - one side

- Suitable as:** • Section insulator, spacer insulator, strain insulator
Conductor material: • Tape up to 40 mm, polywire up to 4 mm, rope up to 8 mm
Distance: • Distance to post is 40 cm
Material: • Extruded plastic, therefore extremely durable

Art. No.	Unit	EAN
15318	10	4 014803 153180

NOTE

Use the knob and nail insulator only in conjunction with 9 V energisers.

Nail insulator farmer®

- Suitable as:** • Section insulator
Conductor material: • Polywire up to 2 mm
Fastening: • Nailing to wood or recycled plastic posts
Advantage: • Ideal for short fences with low voltage, as there is little insulation from the post
Application: • Fixed
Scope of delivery: • Nail

Art. No.	Unit	EAN
153021	50	4 014803 432377

Ring insulator trapper® IS-S

- Suitable as:** • Section insulator, corner insulator
Conductor material: • Tape up to 12 mm, polywire up to 4 mm
Fastening: • Screwing in to wood or recycled plastic posts
Application: • Free running
Support: • Continuous, Ø 5.3 mm

Art. No.	Unit	EAN
14493-50	50	4 014803 144935

Ring insulator farmer® plus

- Suitable as:** • Section insulator, starting/corner insulator
Conductor material: • Tape up to 13 mm, polywire up to 4 mm
Fastening: • Screwing in to wood or recycled plastic posts
Application: • Free running
Support: • Continuous, Ø 5.3 mm

Art. No.	Unit	EAN
15364	50	4 014803 153647

Ring insulator farmer®

- Suitable as:** • Section insulator
Conductor material: • Tape up to 13 mm, polywire up to 4 mm
Fastening: • Screwing in to wood or recycled plastic posts
Application: • Free running
Support: • Short, Ø 5.3 mm

Gates

The gate system is an important component. Gates for passage through electric fence systems are particularly necessary in agriculture. Since a gate is usually opened once or twice a day, it is subject to very high wear. If the gate is open, often no current flows. We therefore recommend an additional underground bridging in order to maintain the current flow and thus herding security.

Gate handle with eye farmer®

Spring travel limit: • 3 cm
Advantage: • Low risk of injury, as the eye, unlike the hook, cannot tear into the hand
Material: • Plastic
Fastening: • Eye for conductor material on handle
Colour: • Black

Art. No.	Unit	EAN
14080SW	1	4 014803 140807

Gate handle with hook ranger®

Spring travel limit: • None
Advantage: • Safe handling due to extra wide flanges
Material: • Plastic
Fastening: • Eye for conductor material on handle
Colour: • Black

Art. No.	Unit	EAN
15295	1	4 014803 152954

GATE HANDLE GREEN

- Spring travel limit:** • None
Advantage: • Safe handling due to extra wide flanges
Material: • Bio HDPE
Fastening: • Eye for conductor material on handle
Colour: • Green

Art. No.	Unit	EAN
14667	1	4 014803 146670

NEW & GREEN

Gate handle with hook ranger®

- Spring travel limit:** • 5 cm
Advantage: • Reinforced insulation, therefore suitable for use with powerful equipment
 • Stainless steel rotating pressure spring
Material: • Polycarbonate
Fastening: • Eye for conductor material on handle
Colour: • Transparent dark grey

Art. No.	Unit	EAN
14350	1	4 014803 143501

Gate handle with hook and tape connector ranger®

- Spring travel limit:** • None
Advantage: • With the mounted tape connector, a tape up to 40 mm wide can be attached directly to the gate, thus ensuring optimum gate opening
 • The tape can be easily re-tensioned
 • Safe handling due to wide flange
Material: • Plastic
Colour: • Black

Art. No.	Unit	EAN
156031	1	4 014803 446541

Gate handle with hook and tape connector turbomax®

- Spring travel limit:** • 8 cm
Advantage: • With the mounted tape connector, a tape up to 40 mm wide can be attached directly to the gate, thus ensuring optimum gate opening
 • The tape can be easily re-tensioned
Material: • Plastic
Colour: • Black

Art. No.	Unit	EAN
151391GNV	1	4 014803 446558

Gate handle with hook turbomax®

- Spring travel limit:** • 8 cm
Advantage: • Extremely durable and compressible pressure spring
Material: • Polycarbonate
Fastening: • Eye for conductor material on handle
Colour: • Transparent yellow

Art. No.	Unit	EAN
15445E	1	4 014803 402509

Gate handle with hook turbomax®

- Spring travel limit:** • 8 cm
Advantage: • Extremely durable and compressible pressure spring
Material: • Plastic
Fastening: • Eye for conductor material on handle
Colour: • Black

Art. No.	Unit	EAN
15139E	1	4 014803 402486

CLEVER COMBINATION: GATE HANDLE & UNDERGROUND CABLE

The current should never be transmitted through the gate handle and the conductor material in the gate. Especially when things need to move quickly, the gate handle often remains on the ground and is not immediately reattached. In this case, the current is diverted via the ground and the herding voltage in the fence drops. So, there is a risk that your animal will escape. Bridge the gate with a parallel installed underground cable.

Gate handle insulator with wooden thread

- Suitable for:** • All gate handles with hooks or eyes
Conductor material: • Rope, polywire, wire
Material: • Plastic, galvanized iron
Application: • For screwing in to wood and recycled plastic posts
Colour: • Black
Support: • Insulator support with thread for wood

Art. No.	Unit	EAN
14092C	2	4 014803 140920
14175	10	4 014803 141750
15126C	5	4 014803 405616

Gate handle insulator with metric thread

- Suitable for:** • All gate handles with hooks or eyes
Conductor material: • Rope, polywire, wire
Material: • Plastic, galvanized iron
Application: • For screwing into through holes of e.g. metal plates
Colour: • Black
Support: • Metric thread M6
Thread length: • 30 mm

Art. No.	Unit	EAN
14169C	5	4 014803 141699

Gate handle insulator non-twisting

- Suitable for:** • All gate handles with hooks or eyes
Conductor material: • Rope, polywire, wire
Material: • Plastic, galvanized iron
Application: • For screwing in to wood and recycled plastic posts
Advantage: • Eyes do not twist away when the gate is inserted
Colour: • Black
Support: • Insulator support with thread for wood

Art. No.	Unit	EAN
14866-10	10	4 014803 148667

Gate handle insulator with wooden thread and thimble

- Suitable for:** • All gate handles with hooks or eyes
- Conductor material:** • Rope, polywire, wire
- Material:** • Plastic, galvanized iron
- Application:** • For screwing in to wood and recycled plastic posts
- Advantage:** • The conductor material can be connected safely and without damage with a thimble
- Colour:** • Black
- Support:** • Insulator support with thread for wood

Art. No.	Unit	EAN
14170C	2	4 014803 141705

Gate handle insulator with metal plate

- Suitable for:** • All gate handles with hooks
- Conductor material:** • Wire up to 2.5 mm
- Application:** • For screwing or nailing on to wood and recycled plastic posts
- Advantage:** • Wire connection screws can be placed on the metal plate. This establishes a connection to other fence wires
- Colour:** • Black
- Scope of delivery:** • Metal plate
• Plastic part with screws

2.5 mm

Art. No.	Unit	EAN
15307C	2	4 014803 405951

Gate handle set with spring

- Application:** • Especially suitable for easy opening and closing of gates through electrically conductive tension spring
- Scope of delivery:** • 1x gate handle turbomax with hook
• 1x gate handle insulator
• 1x ring insulator
• Tension spring, galvanized, thick

Art. No.	Design	Unit	EAN
15416C	Kit	1	4 014803 405708
15487	Tension spring single, galvanized, thick	1	4 014803 154873

Gate handle set with rope

- Application:** • Especially suitable for easy opening and closing of gates without ground contact through electrically conductive rope
- Scope of delivery:** • 1x gate handle with hook
• 1x rope: 4.50 m long (slack), 9.4 long (taut)
• 1x gate handle insulator
• 1x ring insulator

Art. No.	Unit	EAN
15316C	1	4 014803 405937

CATTLE FARMING

These gate handle sets are designed for optimal use in cattle farming.

9.40 m

4.5 m

Gate handle set with thin spring

- Application:** • Especially suitable for easy opening and closing of gates through electrically conductive tension spring
- Scope of delivery:** • 1x gate handle farmer
• 1x tension spring, galvanized, thin

15291	1	4 014803 152916
15291C	2	4 014803 420442

NEW Roller Gate ranger®

Gate handle set 20 mm, swivelling

- Application:** • Gate for electric fences
• Easy to open without the conductor material touching the ground, the tape is rolled up automatically
• Can be swivelled when installed to the 2 sturdy metal holders and can therefore be used for 2 gates
• Large pasture gates or double-row gates up to 7 m width are possible with the 15 m long tape
- Scope of delivery:** • 1 x belt retractor, 1 x gate handle with tape connector, 2 x metal supports, 15 m tape 20 mm

Art. No.	Unit	EAN
14651	1	4 014803 146519

Pasture gate I adjustable

- Advantage:** • Flexible pasture gate can be pulled out by 1 m in each case
- Material:** • Hot-dip galvanized
- Pipe diameter:** • 1 1/4" inside
- Pipe distance:** • 2.3 cm
- Note:** • Prices include fittings
• Delivery ex works. Please inquire freight costs

Art. No.	Length	Unit	EAN
54093	3.05 m - 4.0 m	1	4 014803 540935
54094	4.05 m - 5.0 m	1	4 014803 540942

Square tube post

- Suitable for:** • Pasture gate adjustable
- Application:** • For fastening the adjustable fittings and the bolt lock
- Design:** • With pre-drilled holes
- Note:** • Delivery ex works. Please inquire freight costs

Art. No.	Unit	EAN
54096	1	4 014803 540966

EXPERTS RECOMMEND THE USE OF HORIZONT UNDERGROUND CABLES HERE

With a gate, it is particularly important to install a parallel running underground cable. The underground cable keeps the fence electrified even when the gate is open. As a result, the energy from the fence is not discharged into the ground when the gate is open, so there is no risk to the herding security.
